JEMSEG

Photo: Agriculture and Agri-Food Canada (AAFC)

Parentage	: F55069 x Sable
Breeder	: Agriculture Canada, Fredericton Research Station, New Brunswick
Released	: 1978
Classification	: Table

Description

Tuber Shape	: Short oblong
Eyes	: Shallow, poor distribution
Skin	: Buff
Flesh	: White
Plant	: Medium sized, compact, slightly spreading
Flowers	: Light purple, paling toward tips

Characteristics

Yield	: Medium
Specific Gravity	: Medium
Maturity	: Very early
Resistances	: PVA - highly resistant PVS – highly resistant PVY – highly resistant PVX - immune Wart – Moderately resistant
Susceptibilities	: Hollow heart – very susceptible Common Scab – highly susceptible Fusarium – susceptible PLRV – susceptible Verticillium wilt - susceptible
Consumer Quality	: Good for boiling and baking quality. Fair chipping quality directly from field.
Chief Market	: Early fresh market
Remarks	: Plant 7 – 8” in the row and harvest early to avoid oversize and hollow heart. A valuable variety for the very early fresh market and home garden. Low tuber set. Good response to green sprouting.
