

Pesticides Ban – Over-the-Counter Products

The Province of New Brunswick will ban the sale and use of all pesticide products that are registered with the Pest Management Regulatory Agency of Health Canada as domestic class products (*i.e.*, those that are available for over-the-counter retail sale to the general public) for use in lawn care that meet one or more of the following characteristics:

I. Combination Products

This includes all domestic lawn care products that consist of a pesticide combined or packaged with a fertilizer. This would include fertilizer/herbicide combinations, fertilizer/insecticide combinations, etc.

II. Hose-End Products

This includes all domestic lawn care pesticide products that are designed to be applied using a garden hose. These are most commonly used to apply herbicides over large areas but can also be used for other types of pesticides.

III. Concentrates and Products Requiring Preparation

This applies to all domestic lawn care pesticide products that require mixing, dilution, or some other form of measuring or measurement-related handling by the user prior to application. By way of example, a pesticide that must be poured into or through a measuring device into a diluting agent or into a specialized application device would fall within this category.

IV. Granular Spreadable Products

This includes all granular and pelletized domestic lawn care pesticide products that are delivered by means of a spreading device. Spreadable herbicide pellets would be the prime example for this category.

V. Pesticide Products Containing the Pesticide Ingredient 2,4-Dichlorophenoxyacetic Acid

All domestic lawn care pesticide products that contain the pesticide ingredient 2,4-dichlorophenoxyacetic acid, which is commonly known as 2,4-D.

For consumer information the following domestic lawn care pesticide products meet one or more of these criteria, and will be affected by the ban.

Domestic Lawn Care Pesticide Products to be Banned for Use and Sale
