Special Traits:

AM= AcreMax insect protection / Protection insecte AcreMax

RR or RR2 = Roundup Ready herbicide tolerance / Hybride Roundup Ready

VIP = Viptera insect protection / Protection insecte Viptera

DUR = Agrisure Duracade insect protection / Protection insecte Duracade

VT2P = VT DoublePro insect protection / Protection insecte VT DoublePro

HX1 = Herculex 1 insect protection / Protection insecte Herculex

YGCB = Yieldguard Corn Borer insect protection / Protection insecte Yieldguard

Corn testing contributions in 2022 were made by Charlottetown Research and Development Centre, Agriculture & Agri Food Canada, Perennia Food and Agriculture, New Brunswick Department of Agriculture, Aquaculture and Fisheries and NB Soil & Crop Improvement Association. The 2023 Maritime Corn Hybrid Testing Report has been prepared by Perennia on behalf of the Maritime Corn Performance Committee.

For further information contact Caitlin Congdon: ccongdon@perennia.ca

Performance Index System and Criteria for Inclusion on the Performance List

A combined yield/maturity index called the Performance Index (PI) is calculated for each hybrid in each trial. The PI is compared to a standard which is made up of the average yield and maturity levels of three early and three late standards. This system allows for each hybrid to be compared to the standard and minimizes the influence of yearly fluctuations in weather and environmental factors since both the standards and test hybrids experience the same conditions at each location. The PI is averaged across all sites for each hybrid and measured against the criteria for inclusion on the performance list. The PI for each individual site can be found in the full report. (<https://atlanticgrainscouncil.ca/>)

Performance Index values below 100 are inferior and those above 100 are superior to the boundaries established by the yield and maturity levels of the standard hybrids on a yield verses maturity graph. Grain and/or silage hybrids may be listed when they meet any of the following criteria and have acceptable levels for stalk breakage, emergence, and other characteristics:

1. A cumulative performance index level of **105.0 or greater** with 1 year's testing (minimum 4 site years) – exceptional yield and maturity.
2. A cumulative performance index level of **100.0 or greater** with 2 year's testing (minimum 7 site years) – average or greater yield and maturity.
3. A relative maturity level of **100 + Y or greater** and a relative yield level of **100 – Y or greater** (minimum 7 site years) – high yielding and high moisture (later maturing).
4. A relative maturity level of **96.0 or greater** and a relative yield level of **105.0 or greater** (minimum 7 site years) – low moisture (early maturing) and moderate yield.

Further information on criteria for inclusion or retesting and unacceptable hybrid performance can be found in the full report (<https://atlanticgrainscouncil.ca/>)
