

Publicly Funded Vaccines and biologic products in NB

Program Overview

Immunization is used to prevent and control vaccine preventable diseases. Publicly funded vaccines are those vaccines that are available to the population of New Brunswick as outlined in the eligibility criteria which is determined by the Office of the Chief Medical Officer of Health. Publicly funded vaccines are provided for routine programs for infants, children and adults; targeted programs for high-risk individuals; and for communicable disease follow-up. They are provided free of charge through a network of immunizers in public health clinics, primary care settings, pharmacies, long-term care facilities, other institutions and private organizations
