Loving Care

Parents and Families
Loving Care is a series of four books for parents of children from birth to age 3 developed by Nova Scotia’s Department of Health and Wellness. As a public health resource, Loving Care focuses on information that will help young families to protect, promote, or improve their health, and to prevent illness, injury or disability.

Three of the Loving Care books focus on babies and children at specific ages—Birth to 6 Months, 6 to 12 Months, and 1 to 3 Years. This book—Loving Care: Parents and Families—offers information that will be useful to families whatever their child’s age. Parents and Families is referred to throughout the other books.

Writing: Janis Wood Catano, Easy-to-Read Writing
Design: Derek Sarty, GaynorSarty

Welcome
Welcome
A new baby creates other new lives—a new mother, a new father, new sisters and brothers, new grandparents. All of you will be getting used to new roles and new ways of looking at yourselves and each other.

The birth of a baby changes individuals or couples into a family. It takes time, patience, and love for a new family to take shape and settle into a new life together.

As you give loving care to your new baby, don’t forget to save a little for yourself and the rest of your family.

This book offers information to help parents meet their own physical, mental, and emotional needs. It also gives some information on helping children and grandparents welcome their new family member. We hope that it will help you to make your own decisions about what’s best for you and your family.

Take care of yourself! Your baby, your family, and all of your relationships depend on your health and well-being.

How we decided what to put in these books

There’s so much that parents want to know! We couldn’t include it all. When we wrote this series of books, we had to decide what to put in and what to leave out.

We chose the information we used based on:

- **Best practices**—ways of doing things that we’ve learned work well
- **Research**—results of studies into how to promote the health of infants and young children and help them to grow and develop
- **National and provincial government policies, strategies, and key messages**
- **Interviews** with parents from Family Resource Centres across the province
- **Input from experts in a variety of disciplines**, including: child health and development, culturally specific practices, family care, mental health, and many other fields

Added info...

We’ve written Loving Care for the parents of healthy, full-term babies. If your baby is premature or has health problems or special needs, you can get the specific information you need from your health care providers.
There are things you **won’t** find in these books. For example, we don’t give you detailed directions for how to do things like give a bath or change a diaper. These are things we know you’ll figure out on your own. We’ve tried to focus on information that will help you understand your baby so you can respond to her needs and help her grow and develop.

Some of what you read here may sound different from what you heard growing up. It may be different from what your parents did when they were raising you.

Everything in these books is here to help you give your baby the best possible start in life.

---

**Support for families**

It’s normal for parents to want to talk to someone about their baby and their feelings.

We all need the help and support of the people around us. These are called our “social support networks.”

Your social support network is made up of the people that you can depend on in good times and bad. It can include:

- Family and friends
- Elders
- Other parents
- Community leaders
- Spiritual and faith-based counselors

Many parents find that other parents are one of their best sources of support. You can connect with other parents through Family Resource Centres ([contact information, page 98](#)), play groups, playgrounds, coffee shops, malls, libraries ([contact information, page 98](#)), parks, and other places where parents meet one another. You may feel shy about talking to someone you don’t know, but try it. Other parents are probably as eager to talk as you are.

In most communities, there also are programs and support for parents. These are often free of charge and all parents are welcome.

To learn about programs and supports in your community:

- Check bulletin boards, newspapers, and libraries.
- Ask your public health nurse, outreach worker, home visitor, or other parents.

---

**Added info...**

Besides being a good place to meet other parents, Family Resource Centres offer many different programs for parents and kids. These include parent education, family counseling and support, children’s programs, literacy programs, health and nutrition programs, and employment support.

Family Resource Centres welcome all members of the community.
If you need more help than informal supports can offer, there are many professionals you can turn to.

**Public Health Services**

Public Health works with communities, families and individuals. Its goal is to prevent illness, to protect and promote health, and to help all New Brunswickers achieve wellbeing.

Public Health has many professionals working across the province, in Regional Health Authorities, and in communities. The professionals you are most likely to have contact with include:

- Public health nurses
- Public health dietitians

**Primary health care**

You are receiving primary health care when you visit a doctor or nurse practitioner, consult with a pharmacist, see a midwife or go to a class led by a dietitian at the library.

The word “primary” means first. You receive primary health care from a health care professional who is usually your first contact with the health care system. If you need it, a primary care provider can refer you to specialists and other health services.

You can receive primary health care services from many different kinds of health care providers in many different settings. Primary health care professionals can include:

- Dentists
- Dental hygienists
- Doctors
- Nurses
- Nurse practitioners
- Pharmacists
- Registered dietitians
- Registered social workers

**Tele-Care 811**

Tele-Care 811 answers non-emergency health questions. By dialing 811, you can get information about a health issue or find out if you or your child should see a health care provider.

If you are deaf or have hearing loss you can use this service by dialing 1-866-213-7920 (TTY).

Tele-Care 811 can provide services in English and French.
New Brunswick has a Prescription Drug Program to help with the cost of prescription drugs for children with special needs.

Some families are also eligible for the New Brunswick Prescription Drug Program for low-income children (contact information for both programs, pages 96)
Respectful health care

There are many different kinds of health services that you may seek out—for example, mental health services, addiction services, family doctors, or clinics.

Talk to your health care provider about what you want and need for yourself and your baby. Help your health care provider to offer care that respects your race, culture, religion, sexual orientation and ability.

You are entitled to health care that responds to your individual needs, does not judge you, and allows you to feel safe and respected.

Finding help when you need it

If something about your baby doesn’t seem right to you, trust your instinct.

You know your baby better than anyone else.

If you’re worried, look for help from health services in your community.

There are many people who can help. Keep trying until you find the help you and your baby need. It may take time, effort, and many phone calls.

When looking for help:

- **Think about the problem.** The more clearly you can describe the problem and the kind of help you need, the better chance you’ll have of finding it.

- **Start with people and organizations you know.** Ask for suggestions from other parents, people in your support network, your health care provider, public health nurse, or social worker—anyone you can think of. Organizations like a Family Resource Centre, church, friendship centre, or community centre may also have good ideas.
Keep a list of everyone you talk to. Write down the names and numbers of everyone you call and what they say. Use a scribbler or a notebook so you won’t lose your list.

Ask for suggestions from the people you contact. If the person you call can’t help, ask them to suggest other places to try.

Look for support if you have issues that make it harder to get the information or care you need.

If you have problems understanding English or French, ask for a translator. Many hospitals and clinics offer this service.

If you come from a different culture, ask how you can get a cultural health interpreter at hospitals and clinics.

If you don’t read well, ask the health care provider to explain any printed information or directions to you. Or ask for material that’s easier to read. It’s okay to say, “I don’t understand this.”

Consider taking someone you trust with you to appointments if you are concerned that you might not understand everything that’s going on.

Keep trying! You and your baby are worth the effort it takes to get the help you need.

If you are an immigrant, you’ll find contact information for organizations that can help you and your family on page 99.

Parents
After you give birth, your body will slowly return to normal. This can take 6 weeks or longer.

It's common to have some physical discomfort after giving birth. Talk to your health care provider about postpartum physical care.

If you’ve had a cesarean birth, you can also get advice on postpartum care and comfort measures from your health care provider.

All mothers have some vaginal bleeding after giving birth. This is a normal part of recovering from childbirth. Vaginal bleeding:
- Can last for up to 6 weeks
- May be dark red and heavy for the first few days

- Will lessen over time and become lighter in colour. You may notice more bleeding when you are more active than usual.

Use pads or panty liners while this bleeding lasts.

### Added info...

You need a postpartum check-up about 6 weeks after giving birth. This is an important part of your health care.

Make the appointment with your health care provider as soon as you get home from the hospital.

---

## Baby blues and postpartum depression

### Baby blues

Many women have very mixed feelings that start a few days after their baby is born. This is so common that it has a name—baby blues.

You may feel:
- Let down, disappointed
- Happy one minute and crying the next
- Sad
- Stressed out
- Cranky
- Worried
- Overwhelmed

You may be very tired but still have trouble sleeping.

These feelings are normal. They usually go away in a week or two.

If you feel like this, take care of yourself. Ask for help and support from the people around you. Talk to other mothers about how you feel.
Postpartum depression

Postpartum depression is a kind of depression that can happen to women after childbirth. It is a medical condition.

Postpartum depression can happen to anyone. It does not mean that you’re a bad mother. It just means that you need some help to get through a hard time.

Mothers with postpartum depression can have many different feelings. These may include:

- Sadness—crying a lot or feeling like you want to cry
- Feeling helpless or hopeless
- Exhausted—you can’t seem to fall asleep and you can’t seem to wake up
- Worried, panicky, full of doubts
- Anxious, tense, on edge, angry
- Guilty
- Worthless, lonely
- Confused—can’t think clearly
- Having no feelings for your baby
- Feeling like you want to hurt yourself or your baby
- Scary thoughts

Baby blues don’t usually last longer than 2 weeks. If you still feel sad or upset after 2 weeks, or if these feelings are getting stronger, look for help. You can contact:

- Your health care provider
- Local emergency room
- Local mental health clinic (contact information, page 96), private counselor, psychologist, psychiatrist, or social worker
- Tele-Care by calling 811
Your body will need time to heal after childbirth—usually about 6 weeks. Wait until your body is ready before having vaginal sex. This may be when any stitches have healed and your bleeding has stopped or is very light in colour and amount.

Many new mothers find that they are less interested in sex for a while after their baby is born. You’re tired. You may still be sore from the birth. You’re busy. You’re getting used to being a mother. All of these things can make you less interested in sex. Wait until you feel ready.

Talk to your partner about how you feel. There are ways to be close without having sex. You can kiss, cuddle, massage, and hold each other. You can talk and listen to one another. You can do special things for one another—like running a bath or making a favourite meal.

When you’re ready to have vaginal sex again, start slowly and gently. Tell your partner what feels good and what doesn’t. It may help to:

- **Use a water-based vaginal lotion or gel if your vagina is dry.**
  It’s normal for your vagina to be dry after having a baby. Using a water-based vaginal lotion or gel can make sex more comfortable for both you and your partner. You can get these lotions or gels at a drugstore. You don’t need a prescription.

- **Try new positions.**
  Do what’s most comfortable for you now.

- **Use birth control every time.**
  Until you are ready to get pregnant again, use birth control every time you have sex. You can get pregnant before your period returns.

**Added info...**

Some breastfeeding mothers find that their breasts leak or squirt milk during sex. Some couples enjoy this and make it part of their lovemaking. Some find it annoying.

You can reduce leaking by breastfeeding your baby or expressing milk before you have sex. Or you can keep a towel nearby and press it against your breasts to stop any leaks.
Birth control

Your body needs time to recover from pregnancy and childbirth before you get pregnant again. Use birth control every time you have vaginal sex until you are ready to have another baby.

There are many different kinds of birth control that all mothers can use after having a baby. Talk with your health care provider. They can help you pick the kind of birth control that will work best for you.

Your periods

Exactly when your period returns will be different for every woman. How you feed your baby affects this. When you breastfeed often and breastmilk is your baby’s only food, it could be as long as 4 to 12 months before your period returns. If you’re not breastfeeding, your period will usually return in about 6 to 12 weeks.

You can get pregnant without having a period. Use birth control every time you have sex until you’re ready to get pregnant again.

Added info...

Latex or polyurethane male or female condoms are the only method of birth control that can protect you from STIs (sexually transmitted infections).

Even if you are using another method of birth control, you’ll still need a condom to protect yourself from STIs.
Birth control

Postpartum Care: Moms
Families come in many forms. Whatever shape your family takes, living with a new baby can be just as tiring and confusing for a new dad or partner as it is for a new mom.

You need to get to know—and learn to take care of—your new baby. This takes time and effort.

You may sometimes feel a bit left out. Everyone asks about the baby or the mother. No one seems to see that parenthood is affecting you, too.

You may also feel helpless once in a while. You may feel the urge to “fix” things when your partner is struggling. Becoming a family takes time, thought, and lots of talking. You and your partner will need to work together to support and help one another.

Remember that you are special to your baby. You’re not just a babysitter. You’re not just “helping out.” You are your baby’s parent. It’s your job to be a full partner in loving, caring for, and raising your child.

- **Share baby care.**
  
  No one “just knows” how to take care of a baby. Mothers have to learn how to change a diaper and give a bath. Partners can learn too. Your baby depends on you for loving care.

- **Be an active parent.**
  
  Spend time alone with your baby. Get to know her. Learn what makes her smile. Figure out what she wants when she cries. Hold her. Smile at her. Talk to her. Sing to her. Show her that she can trust you to love her and to be there when she needs you.

- **Talk about your feelings.**
  
  New parents often have mixed feelings. You can feel proud, happy, worried, relieved, left out, and tired—all at the same time.

  Talk to your baby’s mother. Tell her how you feel. Listen to her when she tells you how she feels. Becoming a parent can be stressful. Being able to talk to each other will help you both be better parents. It will also strengthen your ties to each other.

**Added info...**

There are many different kinds of families and many different relationships in which people love and raise children as partners and families.

- You and your partner may be gay, lesbian or straight.
- You may be transgender.
- Both parents may be living together or living apart.
- You may be birthing your baby, adopting, or fostering.
- You may be raising a grandchild.
- You may be living on your own, or sharing a home with other family members.

We hope that all those who are welcoming a new baby—or babies—into their lives and families will feel included here.
• **Support your baby’s mother.**

New mothers need physical, emotional, and financial support.

Pregnancy and birth are hard on a woman’s body. It will take time for her to recover. She may also have mood swings or “baby blues.” She will need your help, support, and understanding.

Some mothers develop more serious postpartum depression. Read the information about postpartum depression on page 12 of this book. If your partner shows any signs of depression, help her to get the help she needs.

When she’s breastfeeding, she’ll need your support, too. Breastfeeding gives your baby the best possible start in life. It contains exactly what babies need to grow strong and healthy. It protects them from allergies and illness. It can take time for mothers and babies to learn to breastfeed. Your support and encouragement make a big difference, especially if breastfeeding is not common in your family or community.

It takes time for you to learn how to best support your partner. Be kind and patient. Ask your partner what she needs and wants. By supporting your partner as she breastfeeds, you are giving your baby the best possible start in life.

• **Build a loving family.**

Spend time with your baby and her mother. Do things together that you all enjoy. Grow together into a loving, supportive family.

Having a baby is one of the biggest changes you and your partner will have in your lives. You will grow as a parent over time. The more you put into being a parent, the more you will get out of it.

---

### Added info...

It may be a while before your partner is interested in having sex again.

Her body needs 6 weeks or longer to recover from childbirth. She’s tired. Learning to be a mother can be stressful.

• **Be patient.** There’s no need to rush. You can stay close physically by kissing, cuddling, and massaging one another. When your partner is ready for intercourse, start slowly. Be careful and gentle. Let her tell you what feels good.

• **Use a water-based vaginal lotion or gel when you start having sex again.** It’s normal for a woman’s vagina to be dry after having a baby. Using a water-based vaginal lotion or gel can make sex more comfortable for both you and your partner. You can get these lotions or gels at a drugstore. You don’t need a prescription.

• **Use birth control every time you have sex until you and your partner are ready to have another baby.** A woman can get pregnant anytime after having a baby, even if she hasn’t had a period.

Latex or polyurethane male or female condoms are the only method of birth control that can protect you from STIs (sexually transmitted infections).

Even if you and your partner are using another method of birth control, you’ll still need a condom to protect you both from STIs.
And baby makes two ................... 21
When parents don’t live together ........... 22
  • When your child lives with you .......... 23
  • When your child lives with the other parent .................... 24

Single Parenting
And baby makes two

Being a single parent is not unusual. Many parents find themselves raising a baby without a partner.

All of the advice in this book on taking care of yourself physically and mentally is especially important for you as a single parent.

Don’t forget to take some time for yourself away from your baby. Accept offers for childcare from friends and relatives you trust.

Your baby has only you to depend on, so your health and well-being are important.

- **Find people to talk to.**
  Sometimes just saying what’s worrying you out loud can help you think things through. Having someone who will listen to you and pay attention to what you say is important for everyone. Sometimes you just need a friend, neighbour, or family member who knows and cares about you. Sometimes you need to talk to a counselor, public health nurse, social worker, or spiritual or religious leader.

- **Ask for help when you need it.**
  You’ll have questions and worries. All parents—single or not—need help and support sometimes. Other parents and single parents are a great source of information and support. So are your friends and family.

- **Look for support in your community.**
  Look for single-parent support groups, Family Resource Centres ([contact information, page 98](#)), and parent-child play groups.

All of these people and groups—like friends, family, community groups, and Family Resource Centres—become part of your social support network. They are the people you can depend on in hard times. They are the people who will help you when you need it, and who know you’ll do the same for them.

This kind of network can make a big difference in your life and in your child’s life.
When parents don’t live together

There are many reasons why the parents of a child may not live together.

Each parent has a different and important role to play in a child’s life. Whether they live together or not, all parents share the same goal—to raise a happy, well-adjusted child.

To do this, it’s important to:

• **Put your child first.**
  Your relationship with your child is your most important relationship. Even though you might be angry or resentful of the other parent, it’s important to think about—and do—what’s best for your child.

• **Allow your child to love and be loved by both parents, if this is possible.**
  Children do best when they have a healthy relationship with both their parents. This isn’t always possible, but when it is, it is helpful to respect and support the other parent’s role in your child’s life.

• **Treat your child’s other parent with respect.**
  This may not always be easy, but it’s important for your child’s development and happiness that you are polite and treat the other parent with respect. It is harmful for children to see their parents fighting. No matter how you feel about your child’s other parent, it’s important to separate these feelings from your feelings about your child. Your child learns by watching what you do. How his parents treat one another when they are upset or angry will be a model for him to follow.

**Added info...**

Many parents who don’t live together need support to deal with their feelings. They may need help to agree on how to parent their child.

You may find that you need counseling, legal advice, a support network, or other kinds of help.

Look for the help you need. Your health and happiness are important to your child. Taking care of your own needs and finding ways to work respectfully with your child’s other parent are important for your child’s health and happiness.

To find out about support services in your community, talk with your health care provider, a Family Resource Centre (contact information, page 98) or your local Community Mental Health Centre (contact information, page 96).

You’ll find information about Family Court on the New Brunswick Courts website and about the Family Law on the Attorney General’s website (contact information, page 96).

If you are leaving an abusive relationship, you’ll find information on child custody and access in New Brunswick’s Family Law Information Centre, a resource from the Public Legal Education and Information Service of New Brunswick (contact information, page 96).
• **Work together to give your child consistent parenting.**

  Young children need to know what to expect. Change is difficult for them. Both parents need to agree on things like rules, limits, and bedtimes for their child. This can be difficult and you may need professional help to work out a parenting plan.

• **Don’t use your child as a way to get even.**

  Keep your child out of your problems with the other parent. Don’t use your child as a weapon against the other parent. Don’t try to keep the other parent away from your child because you’re angry about something else he or she has done.

### When your child lives with you

If the other parent is available and is able to provide safe and loving care, it’s helpful for your child’s development for both parents to be part of her life.

• **Support the other parent’s efforts to be part of your child’s life.**

  For example, suggest going to health care provider appointments, taking your child to visit grandparents, or going to childcare meetings.

• **Encourage the other parent to keep in touch with your child between visits.**

  For example, through phone calls, e-mail, or sending postcards.

Sometimes it isn’t possible for the other parent to have a role in your child’s life. Whether the reason is illness, abuse, or that the other parent doesn’t want to be involved, your child needs to know that:

• It isn’t her fault.

• She will always be taken care of and loved.

Being the main caregiver for a young child isn’t easy. Look for help and support from friends, family and other parents. You’ll find information on finding help and support in the “Welcome” section of this book.

---

**CAUTION!**

Sometimes issues of abuse or illness may mean that it isn’t safe for your child to be with, or have contact with, the other parent. In this case it’s up to you to protect your child.
When you don’t live with your child, it’s important to remember that your child needs you. Even if your child is still a baby, you are setting a pattern for your life together. You need to show your child that you are someone he can depend on and trust.

Be patient. Don’t give up. The more time you can spend together, the better. It takes time, effort, and love to develop a close bond with a child. You are building a relationship that will last a lifetime.

There are many things you can do to be part of your child’s life.

- **PLAN to spend time with your child.**
  Spending time with you is an important part of your child’s life. Make the time you spend with your child an important part of your life, too. Organize your life to make it happen.

- **Do what you say you’re going to do.**
  For example, if you tell your child you’ll be there for a birthday party, be there. Be a person your child can depend on.

- **Do things together.**
  You don’t have to do anything special. You don’t have to give your child treats. Talk, play, and do everyday things together. What your child wants most is just to be with you.

- **Keep in touch.**
  Send your child cards, letters, postcards and e-mails. Talk on the phone. Let your child know you think about him when you’re not together.
Single Parenting
Parenting Together

Sharing parenting .................... 27
Being a couple ....................... 28
Sharing parenting

As parents and partners, you share many things—your love for your baby, your concern for her welfare, your desire to be good parents.

It’s also important that you share in the day-to-day work of caring for your baby. When you feed, bathe, change diapers, dress, rock, and play with your baby, you’re letting her know that you love her. Your baby needs to know that she can count on loving care from both parents.

Decide with your partner how to share the work of caring for a home and baby.

Every family is different, so the ways you find to share in raising your baby will be different too. These suggestions might make it a bit easier for you to work things out.

• **Moms need to give their partner a chance to learn to take care of their baby.**
  Mothers often get a head start on learning to do things like change, wash, feed, and comfort their baby. It can be hard to let go and give your partner a chance. It can be even harder to stand back and let your partner do things differently than you would. Try not to criticize. Try not to step in and take over while your partner is caring for the baby. Your baby needs you both.

• **Dads and partners need to keep trying.**
  It can be easy to back off and let mom do it when she criticizes how you change a diaper or comfort your baby. Try not to take it personally. Maybe she can do the job faster, but remind her that you need to learn, too. Tell her that you’ll all be better off if both of you know how to take care of your baby.

• **It’s not just baby care that parents need to share.**
  You need to share all the work of caring for each other, a home, and a baby. This means finding a way to share things like cooking, cleaning, shopping, laundry, baby care, and work outside the home. When parents find ways to share the work, they both have more time to share the fun of being a family.

• **Parents need to keep talking.**
  Talk about how you feel. Your partner can’t read your mind. If you’re feeling overworked, say so. If you’re feeling left out, say so. Talk about how you can help and support each other.

• **Parents need to respect each other’s “parenting style.”**
  No two parents are alike, even when they’re the parents of the same baby. Many new parents are surprised to find that they and their partner have different ideas about how to raise their baby. They may not always agree about the best way to handle things like crying or bedtimes.

  This means that they have different styles of parenting—they will do things differently and see their child in a different way.

  The key is to respect each other’s parenting style and find a way to work together. It’s confusing for children to get different treatment from each parent. It upsets them to hear their parents disagreeing about what to do.

  Working out your differences now, when the baby is small, will help you to understand each other’s point of view as your baby gets older and new issues come up. This takes time, patience, and lots of talking about what’s important to each of you.
Most couples find that having a baby is a happy, but stressful, event. It can put a strain on any relationship. You put so much energy and effort into being good parents, there’s often little left over for each other.

Your relationship with each other is important—to you and to your baby. Happy parents make happy families.

- **Talk to each other.**
  Talk about what you’ve done all day. Find something to laugh about together. Talk about your worries and fears. Even if you only have a few minutes a day, this will give you a chance to connect with one another.

- **Spend time together.**
  It doesn’t matter what you do, where you go, or whether you go anywhere at all. Just being together is the goal. Even an hour together can be fun.

- **Say something nice to each other every day.**
  Everyone needs to feel appreciated and loved. At least once a day, thank your partner for doing something. Tell him or her what a great job they’re doing as a parent. Say, “I love you.” Don’t take one another for granted. Remind yourselves about what you love about each other.

- **Touch each other.**
  Touch is a way of showing love. A backrub, a foot rub, a kiss, a hug, a touch on the hand all say “I love you” without words.

  • Anger ............................................ 41
Take care of yourself

Babies bring love and joy. They also bring change.

A baby changes how everything happens in your home and your life. Becoming a parent changes how you look at yourself and how you see your place in the world.

Change is very tiring, even when you welcome it.

Most parents are surprised at how tired and overwhelmed they feel for the first few months.

Caring for a baby takes a lot of physical and mental energy. It seems like your baby needs your care, love, and attention every minute of the day—and most of the night. It’s easy to feel as if being a parent is taking over your entire life.

Remind yourself that this time in your life is really very short—even if sometimes it doesn’t seem that way. Enjoy it!

It’s not selfish to take a little time for yourself. You’re still a person as well as your baby’s parent. You’ll take better care of your baby when you take care of yourself.

- **Get as much sleep as you can.**
  Rest when your baby sleeps. Turn off the phone. Hang a note on the door that says, “Do not disturb. Baby sleeping.” Getting in a nap while your baby sleeps can be difficult if you also have a toddler to care for. You can try to time your toddler’s naps to match your baby’s. You can also try snuggling down to read or spend quiet time with your toddler while your baby sleeps. Maybe you’ll both drift off to sleep together.

- **Don’t do anything you don’t have to do.**
  You can make a list of chores from most important to least important. Do only the things that you MUST do to take care of yourself, your baby, and other children.

- **Ask for help when you need it.**
  Take help when it’s offered. Family, friends, and neighbours can help with jobs like food shopping, cooking, cleaning, and laundry. Make a “wish list” of things you’d like help with. That way, you can ask for what you need or when someone offers to help, you’ll remember what you need most.
• **Find someone to talk to.**
  Other parents are a great source of information, ideas, and support. You’ll feel better knowing you’re not the only one with questions, feelings, and problems.

  Playgrounds, coffee shops, malls, libraries, and parks are some good places to meet other parents. You may feel shy about talking to someone you don’t know, but try it. Other parents are probably as eager to talk as you are.

• **Join a group for parents.**
  Look for parents’ groups, mothers’ groups, fathers’ groups, play groups, and Family Resource Centres *(contact information, page 98)* in your community. Community centres, churches, temples, and mosques often offer parent and play groups.

• **Make some time for yourself every day.**
  Try to find some time to be alone. Do something that makes you feel good. Go for a walk or a run. Take a shower or bath. Watch a TV show. Talk to a friend. Read.

• **Take care of your own health.**
  Most parents take good care of their baby’s health—sometimes better care than they take of their own. Your baby and family need you well and strong! Taking care of your health is important for you and your family.

---

### Double Check

Preventing illness is an important part of taking care of yourself. You’ll find contact information for cancer prevention resources on page 97.

---

### Added info...

**Your health and your environment**

Part of taking care of yourself is taking care of your environment. There are many factors in the indoor and outdoor environment that can affect both your health and your children’s health.

If you have questions or concerns about environmental issues—like air or water quality in your home or community—contact your Regional Health Protection Branch *(contact information, page 95)*.
Immunizations

Immunizations are not just for babies and children.

Keeping your own immunizations up to date will protect your health as well as your child’s.

Every adult should get:

- Flu vaccine every year
- A tetanus shot and diphtheria shot every 10 years
- A pertussis shot (whooping cough) with every pregnancy
- A pertussis shot (whooping cough) once as an adult, especially if they are in regular contact with infants and young children

If you have never had measles, mumps, rubella (German measles) or chickenpox, and have never been immunized for them, you should get these immunizations as well.

You may be eligible for other vaccines which are available for those with certain risk factors or medical conditions. Talk to your health care provider about getting the immunizations you need.
Smoking

One of the best things you can do for your own health—as well as for your baby’s—is to not smoke.

Many parents stop smoking before their baby is born because they know that smoking can hurt their unborn baby. It’s important for your own health—as well as for your baby’s—to remain a non-smoker after your baby is born.

Five reasons why you might be tempted to smoke again and some things you can do instead.

1. **People around you are smoking and you can’t resist.**

   It can be very hard to stay quit if your partner or others living with you still smoke. Friends and family who smoke can also make it difficult for you. Ask for their help. Ask them not to smoke around you or your baby. Ask them not to offer you cigarettes. Ask a few close friends or family members to be your support system—people you can call on for help when you want to smoke.

2. **Smoking reminds you of what your life was like before you had a baby to look after.**

   Being a parent may be harder than you think it will be. Everything is different. You may feel tied down. You may be more tired than you thought you’d be. It can make you long for the fun and freedom you used to have. Find ways to have fun now. Play with your baby. Take him for walks. Make friends with other parents. Join a play group. Find a babysitter and go out. Do something you enjoy with someone you like being with. Take care of yourself. Do things that make you feel good about yourself and your new life.

3. **You think that smoking will help you handle your feelings and stress.**

   There is stress in everyone’s life. There are other ways to handle stress than by smoking. You’ll find some ideas on page 39 of this book.
You think you can just smoke a little—just one puff or one cigarette.

One of the things that people do to stop smoking is to smoke fewer and fewer cigarettes over a period of time. Unfortunately, the opposite thing starts to happen when you smoke “just one.” Gradually you will smoke more and more until you are back to where you were before you quit.

If you have started smoking again, think of it as a “slip,” not a failure. Becoming smoke free is a process. It may take many tries to be smoke free. You’ve quit before. You can do it again.

When you feel the urge to smoke:

- Think about why you stopped smoking in the first place. Smoking is still bad for your health and your baby’s health.

- Stay away from places and activities that make you want to smoke. For example, if you smoke when you meet friends for coffee, meet them somewhere else where you won’t be tempted to smoke.

- Do something else. Eat a carrot. Brush your teeth. If you want to smoke after eating, get right up from the table. Go for a walk or do something you enjoy.

- Remind yourself of how much better you feel when you stop smoking.

- Call a friend and talk when you feel like smoking.

You didn’t really want to quit in the first place and only did it because you—or your partner—were pregnant.

Quitting during pregnancy was a wonderful gift—to yourself and to your baby. You gave him a healthier parent. You kept him safe so he could grow and be healthy. He still needs your protection.

Tobacco smoke is just as bad for your baby now as it was during pregnancy—maybe worse. When a mother—or anyone around her—smokes during pregnancy, the smoke she breathes in affects the baby. Now, your baby breathes in even more smoke—the smoke her parents exhale as well as the smoke from burning cigarettes.

This secondhand smoke is very bad for children’s health. When their parents smoke, children have more:

- Ear infections
- Colds and sore throats
- Asthma
- Lung infections
- Allergies
- Coughing and wheezing
- SIDS (Sudden Infant Death Syndrome)
Added info...

It can be harder to stop smoking if there is a lot of stress in your life.

Stress can come from many places. For example, you can feel stress from poverty, feeling alone, or from discrimination you face because of your race, gender, or sexual orientation.

Services that can help you stop smoking are available in a number of languages. The people who offer these services will respect your ethnicity, culture, race, sexual orientation and gender.

Added info...

Stopping smoking is worth the effort. You can find support by calling the Smokers’ Helpline.

**Smokers’ Helpline** offers free phone support and information about programs and services to help you stop smoking or smoke less.

**Phone:** 1-877-513-5333

**Smokers’ Helpline Online** is an interactive web-based service available 24 hours a day 7 days a week. The website features a discussion board, quit meter, quit buddies, and inspirational e-mails.

**Website:** [www.smokershelpline.ca](http://www.smokershelpline.ca)

---

Protect your children from second- and third-hand smoke.

You’ll find information on this in any one of the other Loving Care books.
Alcohol, drugs and gambling

Gambling, alcohol and other drugs become a problem when your use of them affects your own well-being or the well-being of the people around you. They can affect your ability to give your children the love and care they need.

Alcohol is the most commonly used drug and it has health and safety risks. Many long-term chronic health conditions such as breast cancer and heart diseases have links to alcohol. The more you drink, the greater the risks. Women are at a greater risk of harm from alcohol than men.

If you drink alcohol, you can use the national low risk alcohol drinking guidelines to help reduce your risk of long- and short-term problems. You’ll find a copy on page 134.

Gambling can also put you at risk for health and financial problems that can hurt you and your children, friends and community.

You are an important model for how your children learn about alcohol, other drugs and gambling. For example, if your children see you drinking moderately, chances are better that they will also be moderate drinkers when they grow up. You can show your children that they don’t need alcohol to have a good time by having social gatherings that don’t include alcohol.

Look for help if you think alcohol, other drugs or gambling are hurting you, your family or your children. You don’t have to deal with this alone. There are counsellors, community organizations and other services that you can talk to.

Look for help from:
- Addiction Services (contact information, page 94)
- Alcoholics Anonymous / Al Anon (check your local phone book for contact information)
- Narcotics Anonymous (check your local phone book for contact information)
- Gambling Information Line (1-800-461-1234)
- Health care providers

If you have problems with addictions of any kind, you owe it to yourself and your children to get the help you need.

Added info...

It can be harder to deal with an addiction if there is a lot of stress in your life.

Stress can come from many places. For example, you can feel stress from poverty, feeling alone, or from discrimination you face because of your race, gender, or sexual orientation.

The people who offer addictions services will respect your ethnicity, culture, race, sexual orientation and gender.

If you need interpretation services, you can ask your addictions counselor for a cultural health interpreter.
Self-esteem

Self-esteem—feeling good about yourself and what you do—is important for parents. Part of your job as a parent is to help your children feel good about themselves. You do this with your loving care and by responding to their needs. This teaches children that they matter. It builds their self-esteem.

It’s a lot easier to help your children feel good about themselves when you feel good about yourself.

Being a parent is a tough job. Parents learn as they go—and everyone makes lots of mistakes. It’s easy to feel bad about everything that goes wrong. It’s easy to think that everyone else is a better parent or a better person than you are.

One way to build your self-esteem is to focus on what you do right.

- **Think about the good things in your life.**
  Be proud of what you do. Make your baby laugh. Give a friend a hug. Smile—at yourself, at your baby, at your partner, and your friends. A smile makes everyone feel better. Helping others feel good about themselves can make you feel good, too.

- **Be fair to yourself.**
  Nobody does everything right, every time. When things go wrong, you might find yourself thinking, “I’m stupid,” or “I’m useless.” Stop yourself right there. Instead say, “I’m smart. I can handle this.” Build yourself up. Believe in yourself.

- **Do things for yourself.**
  Make plans. Set goals. Take small steps toward reaching them. Give yourself a pat on the back for every little step that gets you closer to your goal.

---

**Added info...**

You may find it hard to respond to your child with the love and care he needs. There are many reasons for this—for example, you may have had a difficult childhood yourself.

You need to deal with your own feelings so you can build a loving bond with your child.

If you are worried about this, talk to a health care provider or Family Resource Centre. They can help you get the support you need (contact information, page 98).
Stress

New parents may feel stressed for many reasons.

• You’re tired.

• You may feel overwhelmed by everything that needs to be done. For example, when the house is dirty, the laundry piles up and you can’t seem to get to it.

• You have less time—for yourself, for your partner, your other children, your job.

• You may have concerns about money, jobs, or housing.

• You’re getting advice about parenting from everyone you know. And they’re all telling you something different.

These ideas have helped other parents handle the stress in their life.

• Take care of yourself.
  Eat well and get the rest you need.

• Slow down.
  Relax. Have a cup of tea. Take a few minutes for yourself.

• Go for a walk. Get some fresh air.

• Learn to say “no.”
  Having too much to do can cause a lot of stress. Focus on doing what needs to be done. Say “no” to other things.

• Find someone to talk to.
  This could be a friend, partner, family member, or someone you trust. Don’t keep your feelings bottled up.

• Look for help if you need it.
  There is lots of help in the community—for example you can try:
  • Mental Health Services (contact information, page 96)
  • Family Resource Centres (contact information, page 98)
  • Support groups

• Solve the problems you can.
  Concentrate on the things that are important to you. Try to let other things go.
Depression

Depression is an illness. It can happen to anyone. It doesn’t mean that you’re a bad parent.

Depression is like a grey cloud over your spirits. Nothing you do seems to make you feel better. You’re not interested in the people or things you used to care about.

When you are depressed, you might feel:

- Helpless and hopeless
- Sad—crying a lot or feeling like you want to cry
- Exhausted—you can’t seem to fall asleep and you can’t seem to wake up
- Anxious
- Tense, on edge, angry
- Guilty
- Worthless, lonely, full of doubts
- Confused—can’t think clearly
- Worried, panicky

Look for help if you feel like this for more than 2 weeks. You can contact:

- Your health care provider
- Local emergency room
- Local Mental Health clinic (contact information, page 96), private counselor, psychologist, psychiatrist, or social worker

Depression can be treated. It’s important for you—and your family—that you get the help you need.
All parents get angry. Anger is a normal emotion and everyone feels it. Getting angry doesn’t mean that you’re a bad parent. It doesn’t mean that you don’t love your children. It means that you’re human.

What’s important is learning to express your anger in ways that won’t hurt your children.

It is frightening for children to see a parent get angry. It can be frightening for a parent to feel that he or she is losing control.

You can find ways to handle your anger that won’t hurt you, your children, or anyone else.

Everyone has things in their life that can make them frustrated and angry.

Parenting is a big part of your life, but it’s not the only part. Sometimes the real cause of your anger has nothing to do with your children. What they do is just the trigger that sets off the anger you feel about other things.

It’s important to understand the real source of your anger so that you won’t take it out on your kids.

In order to deal with your anger, you need to know what’s causing it. Sometimes this is easy to see. Sometimes it’s not. You may need to talk to a counselor who has experience in helping people deal with their anger.

Family Resource Centres (contact information, page 98), and other community organizations may offer anger management programs or be able to help you find one. Look for the help you need. You and your children are worth it.
What to do when you feel angry

Learn to notice when you START to get angry.

Anger has stages. It builds up bit by bit. Sometimes anger builds up slowly. Sometimes you can get very angry, very fast.

It can be very helpful to notice when you’re starting to get angry and do something about it before you explode.

The stages of anger are:

1. **You feel bothered by something:**
   The kids are being very noisy, and you have a headache.

2. **You feel more upset:**
   You ask them to quiet down and they don’t.

3. **You get angry:**
   You tell them to be quiet now. The noise gets louder.

4. **Now you’re really mad:**
   You start yelling. They start screaming.

5. **You’re ready to explode:**
   You want to hit someone or something!

Act BEFORE you get angry.

When you notice that you’re getting upset or angry:

- **Stop.**
  Take a deep breath.

- **Think.**
  What’s going on? Why are you getting angry?

- **Decide what to do.**
  What do you want to happen? What do you want your child to learn? What can you do to get closer to that goal?

- **Do it.**

Take a time-out if you feel yourself losing control.

- **Leave the room.**
  Be sure your baby or child is in a safe place. If your child is old enough to understand, you can say, “I’m getting angry. I need a time-out to calm down.” This not only spares your children seeing you explode, it also shows them what to do when they get angry.

- **Do whatever you need to do to calm down.**
  Take deep breaths. Lie down and close your eyes. Make faces in the mirror.

- **Return to your children when you feel in control.**

Say you’re sorry if you lose your temper.

Tell your child that you were wrong to get angry.

CAUTION!

It is NEVER okay to hit or shake your baby or child.
A little baby makes big changes
Helping children get along together
Sibling rivalry

Eating for wellness

“Wellness” means feeling good—in your body, your mind, and your emotions. It means having people around who care about you.

Eating well helps us to feel well. Food fuels our body, mind, and spirit.

When you feel well, you feel good about yourself. You have the energy you need to live your life and give your children the loving care they need.

How do you feel about food?

Food means different things to different people. You may have happy memories linked to food, like baking cookies with your grandmother, eating dinner with your family, or big holiday meals. There may also be some unhappy memories, like being forced to clean your plate or being punished by being sent to bed without dinner.

How you think and feel about food will affect how you feed your children and what you teach them about food and eating. You are your children’s most important teacher and role model. It can be helpful to think about where your eating habits and ideas about food have come from. Then you can decide which of these you want to share with your children.

You can start by asking yourself some questions about your own childhood.

- Did your family eat meals together?
- Did you watch television while you ate?
- Did your parents encourage you to try new foods?

Added info...

You’ll find good advice about the foods you need to feel well and be healthy in Canada’s Food Guide.

You’ll find information from Canada’s Food Guide in the “Resources” section in the back of this book.

Who decides what you eat?

We are surrounded with so much information about food and so many food choices, that it can be hard to decide what’s best for you and your family.

Advertisements for fast food, junk food, and expensive brands can make it difficult to make choices about how to spend your food budget. Even very young children are affected by these messages.

As a parent, it’s important that you understand your own values around food. Be aware of the influence that marketing can have on your food choices.

For information on marketing to children, see page 53.
• Did you prepare food together?
• Did you grow some of your own food in a
garden?
• Did you have to eat everything on your plate?
• Did your parents encourage you to eat just
until you were full, even if there was still food
left on your plate?
• Did you have to finish certain foods—like
vegetables, for example—before you could
have dessert?
• Was food ever in short supply when you were
growing up?

• Were there times when there wasn’t enough
food to go around?
Can you think of other ways that food affected
your childhood?
Use these questions as a way to start thinking
and talking about how your ideas about food
were formed. Think about how you want your
children to think about food and eating. Talk
about these issues with everyone who lives
with—or eats with—your children.

Decide what you will do to make eating well a
happy part of your family’s life.

Family meals are a time for sharing

Mealtime can be a time to share and to learn—
to talk about the day, to catch up with one
another, and to learn about the food you’re
eating together. Making this time together an
important part of your family life can make
eating well fun for everyone.

Sharing family meals doesn’t just mean eating
together. It can include everything involved in
getting the meal on the table. Even small
children can share in:
• Deciding what to eat—offer healthy options
for your children to choose from. For
example, an apple or a pear, peas or carrots.
• Shopping—avoid the snack aisle when
shopping with children!
• Preparing or cooking the meal
• Setting the table

• Eating
• Cleaning up

Keep mealtimes calm and pleasant. This isn’t
the time to argue or fight. Turn off the TV and
focus on one another.

Added info...

Families come in many different shapes and sizes.

When we say “family” we mean people
who care about one another. They may
or may not live together, but they are
important in each other’s lives.

Your family can be you and your baby or
can include whoever you want it to.
What you can do to make eating for wellness part of your children’s life

• **Be a good example.** Eat well yourself. Sit down and eat with your children.

• **Have regular meal and snack times.** You are in charge of when your child eats. Don’t offer food just to keep your child happy. Don’t use food as a reward or punishment.

• **Encourage children to eat, but don’t force them.** Trust them to eat the amount of food they need to grow and be healthy.

• **Involve the whole family in planning and preparing meals.** Give your children happy memories of their own.

• **Offer healthy foods for snacks and at meals.** You are in charge of what you buy and what you offer your children.

• **Make mealtimes family times.** Turn off the TV and enjoy sharing a meal and spending time together. Make feeding times for babies and mealtimes for children times for learning, sharing, and love.

• **Offer new foods.** Give your children the chance to try new tastes and textures.

Steps toward eating for wellness

• **Small changes can make a big difference.** Learning to eat for wellness takes time. You can do it slowly by making small changes in the way you eat. For example, you can try:
  - Eating more fruits and vegetables
  - Drinking more water every day
  - Eating more whole grain breads and cereals
  - Choosing snacks lower in fat and sugar

• **Look for ways to eat well for less money.** Look around your community for lower cost food choices. You can try farmers’ markets, local trading systems, and community gardens. Foods grown close to home are fresher because they get from the field to your table faster. Supporting local markets and community gardens also helps build your community. You’ll learn more about food and meet new people. And it can be a lot of fun!

Shop for basic foods from Canada’s Food Guide. You’ll save money by buying fewer pre-packaged and convenience foods.

• **Learn more about cooking.**

  Cooking is a skill. Everybody learns by watching others, asking for advice, and trying. Cooking and eating simple, nourishing meals together can be fun for the whole family. It will give your children a good start toward a lifetime of healthy eating.

  • Pick basic, easy recipes.
  • Shop for healthy, basic ingredients.
  • When your children are old enough, let them help with shopping and cooking.
  • Share the food by eating together as a family.

Community kitchens and local cooking programs can help you learn how to cook for less. Look for information about these
programs from Family Resource Centres, local supermarkets, and other parents. Talking with other parents and family members can be a good way to get ideas for shopping and cooking. Your local library will have many cookbooks you can borrow. You can also get good information from registered dietitians.

- **Eat well when you eat out.**
  Eating out once in a while is a treat everyone enjoys. To make healthy choices when eating out:
  - Choose milk, or water to drink.
  - Choose menu items that include healthy foods.
  - *Look for choices that are lower in fat, sugar, and salt.* Look for foods that are steamed, broiled, baked, roasted, poached, or stir-fried. Ask for salad dressing, sauces, and gravy on the side.
  - **Eat only as much as you need.** Some restaurants serve very large amounts of food—more than one person can eat. Don’t force yourself to eat it all. Take what you can’t finish home for later.

- **When you’re pressed for time, plan meals in advance.**
  Being a parent and raising a family takes a lot of time. When you also work outside of the home, time can be in very short supply. Planning ahead can help you make sure you—and your family—eat well.
  - **When you cook, double the recipe.** Freeze half for another day.
  - **Pick a day and make several meals to freeze for later.** This can be fun if you do it with a friend.
  - **Plan for more than one meal at a time.** For example, make extra for supper and use the leftovers for lunch the next day.

- **Focus on healthy snacks.** When time is short, you may miss a meal once in a while. Make sure you have healthy snacks on hand so you and your children don’t fill up on less healthy foods. Carry healthy foods with you when you’re out. Fruit, cereal bars, and whole grain crackers are healthier choices.

---

**Double Check**

You’ll find information about preparing and storing food safely in “Family Food Safety” on page 60.

---

**Added info...**

Sometimes getting enough healthy food to meet the needs of your family can be a challenge. At one time or another, this can be true for anyone. These times can be very stressful.

Check out groups in your community that can offer support with food options—for example, cooking clubs, community gardens, and other programs. Call your local Family Resource Centres, local farmers’ markets, food banks, and other service agencies to learn about resources in your community.

Many groups in New Brunswick are working on projects and ideas to improve access to local food in the community and welcome volunteers.
Fitting exercise into life with a young family can be a challenge. But believe it or not, the more active you are, the less tired you’ll feel.

You need about 30 to 60 minutes of activity each day to stay healthy. You don’t need to get it all at once. Ten minutes here and there of walking, climbing stairs, or active play with your child add up over the day.

- **Walk whenever you can.**
  
  You can walk even during the winter. Start with a 10-minute walk—gradually increase the time. Walk to the store. Walk to do your errands whenever you can. Look for walking paths near your home. Take your kids with you.

- **Play with your children.**
  
  Roll around on the floor together. Dance around the room holding your baby.

- **Look for activities or programs where you live.**
  
  You might find exercise classes or parent and child activities. You can contact your local recreation department, community centre, or YM/YWCA.

The benefits of being active are endless—for you and your family. You’ll be healthier and feel happier. And spending active time together will bring you closer to one another. Start slowly. Do more over time. You’ll feel better and be an active example for your children.
Screen time

Children learn best and have the most fun playing with people and exploring their world.

There is a lot of research showing that sitting a child in front of a TV or computer screen won’t help her brain develop. This is true even for shows that are made for young children. In fact, the more time a baby or young child spends watching TV or videos, or playing video games, the more likely screen time is to have a bad effect. Children who spend time with TV, videos, and video games learn fewer words and have more difficulty focusing.

Screen time—with TV, videos, and computers—can’t replace your love and attention. Screen time can’t replace the benefits your child gets from playing.

To help your child develop:

- **Limit the amount of time your child spends watching TV or videos, or playing with video games.**

  If your child watches TV or videos, watch with her. Talk to her about what you’re seeing and hearing. The Canadian Paediatric Society recommends that families limit the amount of time they spend watching TV or videos to less than 1 to 2 hours per day. Other experts suggest that no screen time at all is best for children under 2 years of age.

- **Don’t keep the TV on all the time.**

  It will distract your child while she’s playing and learning. Even if your child doesn’t seem to be paying attention to it, TV can still be distracting.

- **Encourage your child to be active.**

  The more time a child spends in front of a screen, the less time she spends in active play. Children need at least 2 hours of active play every day.

Playing alone, playing with you, doing things for herself, and being active are more important for your child’s development—in mind and body—than any video, TV show, or computer game.
Marketing to children

Marketing aimed at children is everywhere. Its goal is to encourage you to buy certain products. You’ll find marketing on TV, on the internet, and in movies, games, and video games. For example, you’ll see the characters from children’s favourite TV shows on food, clothing, sheets, towels, video games, toys, diapers, vitamins, books, and many other products. Many of the most heavily advertised products promote violence for boys and encourage girls to be sexy or focus on how they look. They push children to grow up before they are ready.

Marketing both shapes and reflects our society. It can affect children’s values and beliefs. It is very difficult to protect your child from all marketing.

What you can do is:

• Be aware of it.

• Think about how what your child hears and sees compares to the values you want to share with him.

• Limit your child’s exposure to messages you don’t agree with. It’s up to you to decide what TV, video games, and movies your child sees. For example, turn off the television. The fewer messages your child sees, the less influence they will have. Make sure that everyone who cares for your child knows your rules about what he can watch.

• As your child gets older, talk to him about the messages he sees and hears. Help him figure out what’s true and what isn’t.

Your child learns from your example. Follow your own values when deciding what you buy and what you allow your child to see and hear.

Marketing is aimed at parents too. You may feel pressure to buy things for your child from the media and from other parents. Think about whether you will—or will not—let this pressure influence the choices you make.
Fire safety

To prevent injuries and death from fires:

- **Keep a fire extinguisher within reach in the kitchen.**
  Read the information that comes with it. Check the “best before” date often to be sure it hasn’t expired.

- **Store matches, lighters, lighter fluid, gas, and candles out of reach of children.**

- **Have smoke detectors in your home.**
  - Be sure all smoke detectors in your home have the ULC stamp of approval.
  - Read and follow every step of the manufacturer’s directions when you install your smoke detectors.
  - Install smoke detectors outside each bedroom and sleeping area and on every level of your home, including the basement.
  - Test them regularly to be sure they are still working. Check the batteries when the time changes in the Spring and Fall.
  - For more information on smoke detectors contact Consumer Product Safety (contact information, page 99).

- **Have a fire escape plan.**
  If a fire should ever happen, you and your family will need to get out of your home quickly. Thinking this through in advance can save your lives.

  For information on fire safety, fire prevention, and escape plans, contact your local fire department. You’ll find contact information on the first page in your phone book.

---

**Added info...**

Emergencies like floods and hurricanes don’t happen often, but when they do, it’s good to be prepared.

You can get added information about emergency planning from the Red Cross and the Department of Public Safety (contact information page 99).
Car seats

Car seats save lives. When you use the right car seat in the right way, you can lower the risk that your child will be hurt or killed in a crash by 70%. Look for a car seat that has the Transport Canada safety mark.

In New Brunswick, it is the law that your baby must be in a car seat whenever she is in a car or truck. Protect your child by using a car seat on every ride, including when travelling with grandparents, caregivers or in taxis.

You’ll find information on how to choose and install car seats in *Be Safe and Keep Kids Safe: A Parent’s Guide to Car Seats*. You’ll find a copy in the “Resources” section in the back of this book.

Sun safety

No matter what their race or skin colour, all children need protection from the sun.

Babies’ and children’s skin burns easily and needs protection whenever you go outside. Babies and children can get a sunburn even on cloudy days. They can also get a burn from light reflected from sand, snow, water, or concrete.

**To protect your child from the sun:**

- **Keep your child in the shade.**
  It’s especially important to keep him out of the sun between 11 am and 4 pm when the sun is strongest.
- **Cover up.**
  Physical sunblocks—like clothing and hats—are your best protection against sunburn. Keep your child covered in lightweight clothing. Protect his eyes with sunglasses that block both UVA and UVB rays.

**Be sure your child wears a hat that:**

- Shades the face, back of the neck, and ears
- Is easy to keep on
- Is made from tightly woven fabric. This allows less UV radiation to pass through.

Your child also needs to be protected from the sun while in a stroller or baby carrier.
• **Use sunscreen.**

Read sunscreen packages carefully. Look for a sunscreen that:

- Is SPF 15 or higher
- Protects against both UVA and UVB rays—this is sometimes called “broad spectrum sunscreen”
- Is waterproof
- Is non-irritating and hypoallergenic

Sunscreen has an expiry date. Check to be sure it’s still good before you use it.

Put sunscreen on 20 minutes before you go out. Sunscreen that contains zinc oxide or titanium oxide will protect your child right away. It doesn’t need to be applied 20 minutes before you go out.

When you apply sunscreen be sure to cover any skin that’s showing. This includes face, ears, nose, back of the neck, and the tops of the feet. Kids are squirmy! It’s easy to miss a spot.

Don’t put sunscreen around children’s eyes—it can sting.

**Reapply sunscreen often** when you’re outdoors—at least every two hours or after swimming.

---

**Added info...**

Days at the beach and special events like Canada Day picnics can be fun for the whole family. But if you’re not careful, a long day outdoors can lead to sunburn.

Remember: Keep your child covered, take breaks from the sun, reapply sunscreen often, and carry water with you.

---

**CAUTION!**

Some sunscreens contain insect repellent. If you are using this kind of sunscreen, treat it like an insect repellent, not a sunscreen. Follow the directions on page 58. If you want to use a separate sunscreen and repellent at the same time, apply the sunscreen first. Wait 20 minutes. Then apply the insect repellent. Follow the directions on page 58.

**CAUTION!**

Babies under 1 year should not be in direct sunlight outdoors.

Protect them in a covered stroller, under an umbrella, or in the shade. Be sure that they wear a hat, sunglasses and clothes that cover their arms and legs. Use sunscreen to protect them from reflected sunlight.
Overheating

Infants and small children overheat easily in hot, humid weather. Overheating can cause serious health problems.

Humidex and Health Advisories are issued when the weather is hot enough to cause concern. Listen for these on local radio and TV stations on very hot days.

Insect bites

Mosquitos

Mosquito bites are not only itchy and unpleasant, they can also carry serious illnesses.

The best way to prevent bites is to keep mosquitos away from your child.

- Avoid places where there are likely to be lots of mosquitos.
- Stay inside at dawn, dusk, and early evening. This is when mosquitos are most active.
- In places where there are likely to be mosquitos, dress in long-sleeved, light-coloured clothes made from tightly woven fabric.
- Use mosquito netting around strollers.

Using insect repellent

- Birth to 6 months:
  - Do not use insect repellent on babies under 6 months.
- 6 months to 2 years:
  - Use insect repellent only when there is a good chance that your child could be bitten.
  - Use products labelled 10% DEET or less.
  - Apply insect repellent only once a day. It will protect for about 3 hours.
- 2 to 12 years:
  - Use products labelled 10% DEET or less.
  - Apply insect repellent no more than 3 times a day. Each application will protect for about 3 hours.
The ticks that cause Lyme disease have been found in New Brunswick. Only Blacklegged ticks may carry the bacteria that can cause Lyme disease.

If you are concerned about ticks, be sure the insect repellent you use for yourself and your child says on the label that it is effective against ticks.

To protect against ticks:

- **Cover as much skin as possible** when walking, working, or playing in places where ticks are found. Be sure you and your child wear enclosed shoes. Tuck shirts into pants. Tuck pant legs into socks. Dress in light-coloured clothes. This will make it easier to see ticks.

- **Check yourself, your child, and pets after being outdoors in grassy or wooded areas.**
  
  Check clothes. Check all parts of the skin—including armpits, groin, and scalp.

If you find a tick, remove it right away.

- Grasp the tick with tweezers, as close to the skin as possible.

- Gently and slowly pull the tick straight out. Don’t jerk, twist, or squeeze it.

- To avoid infections, clean the skin where the tick was attached with soap and water, rubbing alcohol, or hydrogen peroxide. Contact your health care provider if a rash or flu-like symptoms develop after a tick bite.

If you find a tick or would like more information about ticks, contact your health care provider, or your local Public Health office (contact information, page 96), call Tele-Care at 811, or check the Department of Health website on page 95 for a link to the pamphlet, Protect Yourself Against Lyme Disease.

---

**When you use insect repellent:**

- **Read the label carefully.** Follow the directions exactly.

- **Do not put repellent on a child’s face and hands.** This makes it less likely that she will get it in her eyes or mouth. If your child does get insect repellent in her eyes, rinse with water.

- **Do not put repellent on sunburns, open wounds or scraped or scratched skin.**

- **Apply as little repellent as possible.**

- **Apply the repellent on bare skin or on top of clothing.** Never use it under clothing.

- **Apply insect repellent only where there is lots of fresh air—not in a closed space.** Never use it near food.

- **Wash away the insect repellent with soap and water** when your child no longer needs to be protected.
Safety around animals

Pets

Never leave a baby or small child alone with a pet in your home or in anyone else’s home. If you visit a home where there are pets, check with the pet owner to be sure the home is safe for children and the pet is comfortable around them. Talk to your vet about the best way to keep babies and small children safe around pets.

Your child is much more likely to get salmonella if there are reptiles in your home. It’s safest to remove all pet reptiles—like turtles, lizards, and snakes—from your home.

Wash your hands after handling pets, reptiles, animal waste, or fish food.

Wash your child’s hands after they play with animals. Keep cat litter boxes out of reach.

Wild animals

Wild animals are best enjoyed at a distance. Keep your child away from them—even those that seem tame. Don’t encourage your child to feed wild or stray animals.

Rabies

Rabies is a rare, but very serious, disease that can be passed to humans—usually through the bite of an infected animal. If rabies isn’t treated, it is almost always fatal in both animals and humans.

To protect your family from rabies:

- Close garbage can lids tightly. Easy-to-open cans attract wild animals.
- Teach your child to never touch or pet wild animals or animals he doesn’t know—even if they seem tame or friendly.
- Keep wild or stray animals out of your home or cottage.
- Never feed wild animals.
- Never try to nurse a wild or stray animal. A sick animal could have rabies.

Bats can carry rabies. See a health care provider if you or your child have been bitten by a bat or were in direct contact with a bat’s saliva or brain tissue.

If you would like more information about rabies, contact your local Public Health office (contact information, page 96) or check the Department of Health website on page 95 for a link to the pamphlet, Protect Yourself Against Rabies.

CAUTION!

See your health care provider if your child gets any kind of injury from an animal.
Family food safety

Food safety is important. Food poisoning can make anyone sick. It can make babies and small children very sick. You can prevent food poisoning by being clean and careful when you handle, prepare, and store food.

Keep things clean.

Wash your hands for 20 seconds with soap and warm water:

- Before and after you handle food
- Before you feed your baby or child
- Before you eat

Keep your kitchen and everything you use to prepare food clean.

- Wash your kitchen counters with hot water and detergent before and after preparing food. Use paper towels or a clean dishcloth. Change the dishcloth every day.
- Wash everything you use to prepare food with detergent and hot water. Rinse them with hot water and let them air dry. Or you can wash them in the dishwasher. This includes cutting boards, bowls, pots and pans, utensils, can openers, and blenders.

Handle food carefully.

Thaw food in the refrigerator, not on the counter. You can also thaw food in the microwave if you will be cooking it right away.

Wash all fresh vegetables and fruits under running water.

Wash fruit by rubbing it with your hands. Use a brush to scrub firm vegetables and fruits—like potatoes, carrots, and melons.

Keep raw eggs, meat, fish, and poultry away from other foods.

Keep them separate in your shopping cart, in your refrigerator, and while preparing food.

- Wash your hands, knife, and cutting board in hot water and detergent after you cut up raw meat, fish, or poultry. Do this BEFORE you touch other foods or use these utensils with other foods.
- If you can, use one cutting board for raw meat, poultry, and fish, and a different cutting board for foods like fruits, vegetables, and bread.
- Wash plates and bowls that have held raw meat, poultry, fish, or eggs before putting any other food in them.

Added info...

For extra protection, you can sanitize your counters, cutting boards, and utensils with a mixture of 5 mL (1 teaspoon) of bleach in 750 mL (3 cups) of water.

This is very important after preparing raw meat or poultry.

Added info...

You can’t see, smell, or taste the bacteria that cause food poisoning.
Cook food carefully.

- Cook meat and poultry using a meat thermometer.
  Safe temperatures are:
  - Pork, Veal, Lamb: 71°C (160°F)
  - Ground Meat: 71°C (160°F)
  - Whole Chicken/Turkey: 82°C (180°F) (Check the temperature in the thickest part of the thigh without touching a bone.)
  - Chicken/Turkey with stuffing: 74°C (165°F) (Check the temperature in the centre of the stuffing.)
  - Chicken/Turkey pieces: 77°C (170°F)
  - Ground Poultry: 74°C (165°F)
  - Beef Steaks/Roasts:
    - 63°C (145°F) medium rare
    - 71°C (160°F) medium
    - 77°C (170°F) well done
- Cook eggs and fish all the way through.
- Cook sprouts thoroughly.
  It’s not safe to eat raw sprouts because they can’t be washed well enough to remove all the germs.

Store food carefully.

- Store food that can spoil in the refrigerator.
  This includes: fruits and vegetables, meat, eggs, and dairy foods—like milk and cheese. Put all raw meats on the lowest shelf of the fridge. Put ready-to-eat foods on the shelves above.
- Store food in unopened cans and jars in a cool, dry place.
  Don’t use food from cans that are dented, leaking, or bulging. Don’t use food from jars with loose or bulging lids. If you buy a lot of canned foods at once, write the date on the can. Use them within 2 years or before their “best before” date. Once you’ve opened the can or jar, store the food in the refrigerator.
- Serve food as soon as it’s cooked.
  Don’t let leftovers or any kind of prepared food sit around at room temperature for longer than 2 hours. Refrigerate or freeze them right away.
- Keep hot food hot and cold food cold.
  This is especially important when traveling, or at picnics, buffets, and barbeques. Use a freezer bag to keep food cold away from home. If you have any doubt about whether a food is safe, don’t eat it.

Added info...

Fruit juice, cider, milk, and milk products should be pasteurized.

To find out more about food safety, check the references listed on page 99.
Safe drinking water

Water is the best drink for your child between meals and snacks. Make sure your water is safe for your child and family to drink.

Well water

If you get your water from a well be sure to have it tested before your child drinks it.

If you are not sure that your water is safe, give your child bottled water.

The New Brunswick Department of Health recommends that your well water be tested every 6 months for bacteria and every 2 years for chemical content. A good time to test your well water is after snowmelt in the spring. You may also need to test your well water after a flood.

For more information about safe drinking water and to find out what tests you need, how to do them, and what the results mean contact your Regional Health Protection Office. For information on what to do if your well is flooded, see the natural disasters and severe weather information on the Department of Health website. Do not use water from roadside or natural springs. This water is not tested. It is not a safe water supply.

Lead in water

Whether you get your water from a well or a municipal water supply, if there is lead in your pipes, pumps, or plumbing, Health Canada recommends that you let your cold water tap run for about 5 minutes every morning. This will flush out lead and copper that could build up in the water overnight.

Hot water will draw out more lead and other minerals that may be in your plumbing. Always use cold tap water for drinking, cooking, filling your kettle, and mixing formula.

Lead poisoning

Lead-based paint

Lead-based paint is a serious health hazard. Lead poisoning can cause anemia. It can also damage the brain and nervous system, resulting in learning disabilities.

Lead-based paint is especially dangerous:

- When it is chipping or flaking
- When it is in a place that a baby can reach or chew on

If your home was built before 1960 it is likely that it has lead-based paint.

If your home was built after 1980, paints used indoors would be lead free, but there may be lead in the paint used on the outside.

If your home was built after 1992, both indoor and outdoor paints will be lead-free.

If you think there is lead-based paint in your home, contact your Regional Health Protection Branch.
Grief is what you feel when you lose something you value. Grief is a normal and natural response to loss.

The birth of a baby and the early days and weeks of parenting can be times of great stress and intense feelings. You can feel loss, as well as gain, as you become a parent. There are many new feelings to deal with. It’s also a time when old feelings of grief and loss are often stirred up.

Everyone faces loss at some time in their life. Most of us understand and expect grief when someone dies. We grieve the death of a loved one or the loss of a baby through miscarriage, stillbirth, or SIDS. There is grief at the loss you feel after an abortion.

There are lost hopes and dreams when a relationship breaks down or a family breaks up.

There is a feeling of loss when you find things don’t work out the way you planned or hoped—for example, when a baby is born prematurely or has medical problems or disabilities.

When you lose a job, when a pet dies, or when you move away from friends, or friends move away from you, you suffer a loss.

Everyone feels grief when they lose something they value. All losses need to be grieved.

It doesn’t help to hide feelings of grief. It doesn’t help to ignore them and hope they go away. Grief is a kind of pain that will pop up later if you try to ignore it. You need to work through your grief in order to get on with your life.

It’s important to find healthy ways to express the grief you feel when you lose someone or something that’s important to you. Otherwise, you may take your feelings out on yourself or others. When people can’t express the grief they feel, they can become angry or abusive, abuse alcohol or drugs, or develop illnesses.

Talking with friends, family, elders, or community or spiritual leaders can help. You can call the provincial Helpline for information about resources in your community. Talk with a health care provider if you think you need professional help to deal with grief.

Lead in toys

Canada has laws that regulate the amount of lead in children’s toys. You can check with Consumer Product Safety to find out about any toys that have been recalled because of high levels of lead. Family Resource Centres also often have information about product recalls.
Babies and small children feel loss and grief too. They feel grief when they lose or are separated from someone they are attached to—like a parent, grandparent, brother or sister, or caregiver.

Babies and small children don’t understand why people they are attached to are no longer a part of their life. They don’t understand about death or separation. They don’t understand why a parent isn’t around anymore. They don’t understand why you have moved away from Grandpa. They don’t understand why the caregiver they like is no longer at daycare. But they feel grief at the loss.

Change is difficult for small children and they feel the loss that change can bring as grief.

Babies and small children can’t tell you how they feel. They show grief by:

- Having problems eating or sleeping
- Acting younger than their age—for example, toddlers who have been toilet trained may start wetting their pants again
- Being fussy or very quiet
- Throwing tantrums
- Being very clingy, fearful, or insecure
- Being very difficult to soothe

You can help your baby or small child through grief by being there. Spend extra time with your child. Offer lots of loving care—rocking, hugging, cuddling. Be patient. Talk with her about what is happening.

It also helps to stick to your child’s routines for eating, sleeping, and playing so that the rest of her life is as normal as possible.

Talk with a health care provider if you are concerned about how your child is dealing with grief.

For information on helping your child deal with separation or divorce, see “When parents don’t live together,” page 22.
Values

Our values are beliefs that we learn as children. Values can change as we grow and develop. They guide us in the choices we make and how we live our life.

Our values are shaped by our family, our culture, our religion, our spiritual beliefs, our community, and our experiences.

You can have values about many things:
- How you treat other people
- How you think children should be raised
- How important material things are to you
- The importance of family
- Relationships between partners

Sharing your values with your children is part of being a parent.

The first step in sharing your values with your children is to have a strong and loving bond with them. Children learn the most from the people they care most about and are most strongly attached to. Building this bond of love and attachment starts at birth.

As a parent, you have the closest bond with your children. You are their most important teacher.

You share your values with your children by living those values every day. Children follow your example—they are more likely to copy what you do than to copy what you say. If you respect others, your children will learn from your example to treat others this way.

Parents are teaching their children values all the time—whether they know it or not. If you are parenting with a partner, sharing parenting, or living with other adults, it’s important that you talk together about your values and work out what you want to share with your children. Ask yourself:

- What are the values you learned from your family when you were growing up? Which of these are still important to you? Are there any you’d like to change?
- What are the values you’d like your children to have?
- What can you do to encourage these values?

Once you’ve worked out your values—either on your own or with others—be confident that you have the ability to share them with your children.

It’s also a good idea to talk about values with everyone who takes care of your child. It’s important that they all know the values you would like to see in your child’s daily life.

Added info...

In a multi-racial and multi-cultural society, it’s important that children know about, and feel good about, all parts of their heritage.

If you have adopted a child from another race or culture, it is important that you help her learn about and be proud of both your values and traditions and the traditions of her own race or culture.

If your child is biracial, it’s important that he feels connected to and proud of both parts of his identity.
Traditions

Traditions are customs or practices that are passed down in families. Story time and bedtime routines, holidays and celebrations, and songs and games are a few of the kinds of traditions that are passed along in families.

Every culture and religion has beliefs and stories that can be scary for children. Be thoughtful about how you introduce these ideas, stories, and traditions to your child.

Families have different traditions. If you are parenting with a partner or sharing parenting, it’s important for you to talk about and decide on the traditions and practices that will be good for your baby and family. You may want to start some traditions of your own!

Family violence

Family violence is abuse that happens in a family or other close relationship. Abuse can happen in any kind of family. The people most often abused are women, children, and the elderly.

Abuse can happen at any time, but it often starts—or gets worse—during and soon after pregnancy.

If you are being abused, you may feel afraid. You may feel helpless and worthless. You may feel like a failure. You may think that it’s all your fault. These feelings can make it hard to look for help.

If you are being abused, you should know that:

- The abuse is **NEVER** your fault. You do **NOT** deserve it.
- **NO ONE** has the right to abuse you.
- Children are hurt by seeing or hearing abuse in their family. This is true even if they are not physically abused themselves.
- Physical and sexual assault are crimes. It’s also a crime to **threaten** physical or sexual abuse.
- **You are not alone.** There are people who can help you.
If you are being abused, you will need help and support to work out what you want to do. Talking to someone you trust is a good first step. When you look for support, you are entitled to service that doesn’t judge you and that respects your needs.

You can also look for help and support in your community. Try:

- Women’s shelters or transition houses (contact information, page 100)
- Tele-Care by calling 811
- Police
- Support groups
- Domestic abuse intervention programs for men

- Legal aid
- Counseling services
- Clergy
- Medical services

Whatever you decide to do, your safety and your children’s safety are what matter most.

You’ll find more information about what to do if you are being abused in *Ending Abuse in Your Relationship*, a booklet from the Women’s Equality Branch of the Executive Council Office (contact information, page 100).

---

**Child abuse is a crime.**

**It is child abuse:**

- **When someone hurts a child.** Child abuse can be physical—hitting, shaking, or other injuries. Abuse can be sexual, verbal, or emotional. Neglect—not taking care of a child—can be abuse. It is abuse if a child sees or hears others being abused.

- **When a parent doesn’t protect their child from another person’s abuse.**

The law says that if you know or think that a child is being abused, you must report it to the police or to Child Protection Services (contact information, page 94).

If you have a good reason for thinking a child is being abused, but it turns out you’re wrong, you won’t get into trouble for reporting abuse.

**Added info...**

Abuse can be physical, sexual, emotional, verbal, or financial.

**It is abuse if anyone:**

- Scares or threatens you
- Yells at you
- Calls you names
- Hits or hurts you physically
- Throws or breaks things
- Stops you from seeing your family or friends
- Demands sex
- Questions everything you do
- Tries to control everything you do
- Controls all the money and family finances
- Tells you the abuse is your fault
- Threatens to hurt or kill people or pets you care about
Brothers and Sisters

A little baby makes big changes .......................... 69
Helping children get along together ...................... 70
Sibling rivalry .................................................. 71
A little baby makes big changes

No matter what the age of your other child—or children—a new baby makes big changes in her life. It can take time for a brother or sister to get used to it all.

Children can think, “Everyone is always too busy to play. Mommy is always tired. Everyone makes a fuss over the baby. The baby gets presents and I don’t. Someone is always telling me to be quiet or I’ll wake the baby. It’s no fun at all!”

Bonding with a new baby takes time for brothers and sisters, just as it can take time for parents. Children who feel loved themselves will find it much easier to love their new baby.

To make it easier for other children:

- **Talk to them about babies while you’re still pregnant.**
  Tell them how little and helpless babies are. Tell them about all the things they can do because they’re big now. Look in libraries (contact information, page 99) for children’s books about new babies.

- **Bring them something when you bring the baby home.**
  This could be a small gift or a book from the library. Young children may like their own baby doll to bathe, dress, and take care of.

- **Be patient.**
  Small children may begin to act like a baby again. This is normal and will pass. Keep your children’s routine as normal as possible. Give them time to get used to the changes a new baby brings. Show them that you love them just the way they are.

Never leave a small child alone with a baby. Children don’t know how easily a baby can be hurt.

Teach your children some rules for baby safety:

- Always be very gentle.
- Only grown-ups can pick the baby up.
- Never put anything in the baby’s nose, eyes, mouth, or ears.
- Don’t give the baby any toys without checking with a grown-up.
Your toddler may be learning to get along with a new baby. Your older children may be learning to get along with your toddler.

**Getting used to a crawling baby**

Older children are often fine with a new baby until the baby starts to crawl or move around on his own. Suddenly, little hands are grabbing toys, knocking over blocks, and ruining games.

A baby’s new ability to move around may upset an older child, but it can also be a risk for the baby. Toys that are safe for an older child may be dangerous for a younger one—especially if the baby is at the age where everything goes into his mouth.

This is a difficult time for a toddler. To help make it easier:

- **Respect your toddler’s feelings.**
  
  Listen when he tells you how upset he is. Let him know that you understand. Let him know that it’s okay to be angry and to say so. But it’s not okay to hit or hurt when you’re angry.

- **Don’t expect a toddler to share.**
  
  Toddlers are just beginning to understand things like playing nicely together and cooperation. They don’t really understand sharing until they are about 4 or 5. Even then, it’s hard to do. Learning to share can take a long time.

- **Look for ways to use play space fairly.**
  
  Toddlers have a right to toys of their own and babies need to be safe from toys that could hurt. Toddlers also need some time to play without being bothered. When children share a play space, this can call for some planning. You can:

  - Have toddlers do things like puzzles, colouring, and playing with small toys on the kitchen table or some other place where a baby can’t reach.
  
  - Give toddlers a special shelf or cupboard where they can keep toys that the baby shouldn’t touch. Help toddlers learn to put their toys away when they’re not playing with them.
  
  - Play with the baby while toddlers are playing to give them some peace.

- **Help toddlers learn ways to get along with a baby.**
  
  Show toddlers how to “trade” toys with a baby. When the baby grabs a toy, show them that offering another toy works better than just grabbing it back. Another approach is to help toddlers to wait a few minutes and watch what the baby does. Most of the time, the baby will lose interest in the toy very quickly and the toddler can get it back without fuss. Toddlers are just beginning to learn patience and cooperation, so you may have to show your toddler these things many times.
• **Find things children can do together.**
  For example, you can help them make music together. The baby can shake a rattle while toddlers play a drum or ring a bell. Or you can all build towers for the baby to knock down.

• **Never expect a toddler to look after another child.**
  A crawling baby needs an adult watching at all times. Toddlers shouldn’t be playing alone where you can’t keep an eye on them, either. Leaving them alone together isn’t safe.

---

### Sibling rivalry

Living with brothers and sisters isn’t always easy. But children learn a lot from one another. They learn to share, to get along, and to solve problems.

These lessons take time. When your children are small, it’s up to you to help them learn to live together. Your children will be brothers and sisters for the rest of their lives. Help them get off to a good start.

• **Include your children in helping to care for a baby.**
  If your children want to help you with the baby, let them. Talk about what a baby needs and how they can help. Even young toddlers can help by bringing you a diaper when you change the baby. An older child can talk to the baby while you’re changing a diaper. Or tell a story while the baby is breastfeeding. Praise your children when they’re being helpful.

Giving older children these kinds of little jobs around the home can help them feel important in the family. Make sure there is no chance that a brother or sister could hurt the baby, even by mistake.

Helping older toddlers to understand what the baby needs can help them be patient. For example, “The baby will need a nap this afternoon, but we can go to the park when she wakes up.”

• **Spend some special time every day with each of your children.**
  Talk to them. Listen to them. Play with them. Do something they enjoy—play a game, go for a walk, read a book. Even if it’s only a few minutes, it can make a big difference to your child. This isn’t always easy to do, but it’s very important that each child knows that you love her.

When there’s a new baby in the family, your older children need to know that you
still love them and that they’re still special to you. Help them feel good about themselves. This is especially important for an older child who is missing all the time you had together before the new baby came along.

• **Give each child lots of love and affection.**
  Make sure that each child gets lots of hugs, kisses, cuddles, and snuggles. All brothers and sisters have times when they don’t get along. But they’ll be more likely to get along at least some of the time if they are sure that you love them all equally.

• **Show your children how to get along together.**
  Children learn by watching what you do. When you play with your children, say “Please” and “Thank you.” Show them how to cooperate and take turns. They may be too young to actually do any of this yet, but as they get older, they will remember these lessons. It’s also important that your children see you and your partner, or other adults, solving their problems and arguments in ways that are polite and respectful. If your own disagreements involve yelling or door slamming, your children will behave the same way.

• **Don’t compare children.**
  Find things to admire and praise in each of your children—how polite they are, how well they draw, how fast they run. But avoid saying things like, “Why can’t you be quiet like your brother?”
Brothers and Sisters

Sibling rivalry
Grandparents

Grandparents are learning too ................................75
If this is your first baby, your parents will be learning to be grandparents while you’re learning to be a parent.

You have to work out what kind of parent you’ll be. They have to work out what kind of grandparents they’ll be.

Some grandparents want to spend lots of time with their grandchildren. Others don’t. Some want to babysit. Others don’t. Some are full of advice about how you should parent. Others are happy to let you learn on your own.

If you get along well with your parents, this can be a happy time.

If you and your parents have different ideas about raising children, it can be very stressful.

Our understanding about what’s healthy and safe for children has changed a lot since your parents were raising you. Many of the things you do as a parent will be different from what they did. Talk to your parents to help them understand what you are doing and why. Share your values about parenting with them.

Be polite, but be clear. You are the parent. It’s up to you to decide how to care for your baby.

**Added info...**

Be sure that your parents know not to smoke around your children, either at home or in the car.

CAUTION!

Children should never travel in any car, truck, or van unless they are in a car seat. This includes grandparents’ cars. Be sure that grandparents have the right car seat for your child’s age and size and that it is properly installed in the car. You’ll find more information on how to choose and install car seats in *Be Safe* and *Keep Kids Safe: A Parent’s Guide to Car Seats*. You’ll find a copy in the “Resources” section in the back of this book.
Other Caregivers

Leaving your child with other caregivers . . . . 78
Going back to work or school ................. 80
Finding quality childcare ..................... 81
Other Caregivers
Whether or not you plan to return to work or school while your children are still small, sooner or later you’ll need to leave your baby or toddler with another caregiver. Every parent needs a break once in a while!

Starting sometime around age 6 months, most babies and toddlers begin to understand how important you are to them. They don’t want to let you out of their sight. This can make it very difficult for both of you when you have to leave your child with a babysitter or other caregiver.

Long before you have to leave him, help your child get used to the idea that he can trust others to care for him and that he can trust you to return.

- **Help him get used to other adults.**
  
  Try to bring lots of other people into your child’s life—friends, relatives, neighbours—so that he starts to feel comfortable with different people.

- **Help him learn that you always come back.**
  
  Some babies and toddlers need to see or touch you to feel safe. Try playing peek-a-boo or hiding games to help your child understand that when he can’t see you, you are still there and will always come back. For example, hide behind a sofa or door for a few seconds and say, “Where’s Mommy?” several times. Then pop out and say, “Here she is!” Over time, increase the length of time you hide to a minute or so. You can also let your child be the one who hides.

- **Help your child feel secure.**
  
  Spend time with him. Give him lots of love and attention. Let him know that he’s important to you. Help him learn to do things for himself. Praise him when he does well. The more secure your child feels, the easier it will be for him to let you go for a little while.

**When you leave your child with another caregiver:**

- **Let your child spend some time with the caregiver before you leave.**
  
  It may be worthwhile to hire the sitter to spend an hour or two with your child while you’re there too. This will give them time to get to know one another. It will also give you a chance to show the sitter around your home. He or she will need to know things like where your child sleeps, where food and clothing are kept, where the exits are, and how to lock the doors. It will also give you a chance to see how the caregiver reacts to your child.

- **Stay calm and relaxed.**
  
  If you show that you are upset and worried about leaving, your child will feel it and become more upset.

- **Don’t sneak out.**
  
  Tell your child when you’re leaving. Give him a hug and kiss. Tell him you love him and that you’ll be back soon. Let him wave good-bye—even if he’s crying. Smile and wave back.
• Expect tears.  
Your child would rather you didn’t leave. He’ll show it by clinging and crying. Be patient. Stay calm.

• Leave a list for the caregiver. He or she will need to know things like:
  • Where you’ll be and how to reach you
  • Who to call in an emergency
  • Bedtimes and bedtime rituals
  • Favourite toys and games
  • What and how to feed your child
  • How to calm your child if he cries
  • Information about any allergies or medical conditions

Finding a babysitter to care for your children occasionally
Finding someone you trust to care for your children while you go out isn’t always easy.

• Ask friends, family and neighbours for suggestions.

• Check with local junior and senior high schools. Teachers and guidance counselors may know students who want to baby sit.

• Check with local youth groups or church groups.

Ask the sitter for the names of other families he or she has worked for. Call and ask if they are happy with the sitter.

In some communities, teens can take babysitting classes from community agencies. You may feel more comfortable leaving your child with someone who’s had this training.
Many parents feel conflicting emotions as the time nears for them to return to work or school. For example, you may need to return to work because you need the income, but find the thought of leaving your baby every day hard to bear. Or you might be happy to be going back to school or work, but wonder how this will affect your baby’s development.

Whether you stay at home or return to work or school is a decision you have to make for yourself. What you do will be based on what you and your family need.

Research shows that children can do well both in families where a parent stays home with them and in families where others care for them while their parent—or parents—work outside the home. What matters is that children have consistent, good quality childcare, as well as time and love from their parents.

**Planning a return to work or school**

Returning to work or school is a big change for you and for your child. Planning ahead can help make the change easier for everyone.

**Before you return to work or school**

- If you have freezer space, make double or triple size batches when you cook. Freeze the extras for busy days.

- Start your child in childcare a week or two before you return to work or school.

  This will give your child a chance to get used to childcare. You may find that it helps to stay with her for the first day. Then leave her there for longer each day. Many programs have a routine to gradually introduce children to their centre.

Don’t be surprised—or too upset—if your child cries when you leave. In fact, you may find that she cries more each day for the first week or so. Some children don’t start to cry until the second or third week. Your child cries because she starts to understand that you’re going to leave her. Be patient and consistent. Your child will slowly settle into the new routine.

Starting childcare early will also give you a chance to work out morning routines and figure out how much time you’ll need to get everyone ready each day.

**On work or school days**

- **Do as much as you can the night before or before your child gets up in the morning.**

  For example, pick out clothes for you and your child. Get breakfast ready. Pack lunches, diaper bags, or whatever you need to take to work or school.

- **Leave lots of time to get ready in the morning.**

  Small children can take quite a while to get up and get dressed, especially when they want to do everything for themselves. The more you try to rush them, the slower they get. Set the alarm early enough to allow plenty of time so no one starts the day feeling rushed or stressed.
• **Develop a morning routine.**
  Children find routines very reassuring. Getting up, getting washed and dressed, and eating breakfast in the same way every day lets your child know what to expect. Try not to make TV part of your morning routine. For more information, see “Screen time,” page 52.

• **Pick up your child on time.**
  Your child should be able to depend on you. If you’re going to be late, make sure you contact the childcare staff or your caregiver.

• **Develop an evening routine.**
  Many parents find that coming home from work can also be very stressful—you’re tired, your child is tired, chores are waiting, laundry needs to be done, dinner needs to be cooked. It can be helpful to have some routines for this time of day, too. For example, you could set aside a little time to spend with your child. Do something you both like—cuddle up with a book, walk around the block, have a warm bath. Whatever helps calm everyone down.

If your child is hungry, give her a healthy snack while you get dinner. Spending this time with your child will make it easier for her to cooperate while you get dinner.

**Added info...**

You’ll find information about continuing to breastfeed while working or going to school in *Breastfeeding Your Baby*. You can get a copy from your local Public Health office (contact information, page 96).

---

**Finding quality childcare**

Look for childcare early!

If you are thinking about childcare for your new baby or for your older children, start looking long before you think you’ll need it.

In New Brunswick, childcare can be licensed or unlicensed

**Licensed childcare**

Licensed childcare can be offered in licensed early learning and childcare centres or in licensed early learning and childcare homes. Licensed early learning and childcare centres and early learning and childcare homes must offer children a program that is right for their age and that will support their growth and development.

**They must have clear policies for parents that outline things such as:**

- The fees they charge parents
- How they handle dropping off and picking up children
- Their approach to child development and care

**Other Caregivers**
They must follow rules about:

- The number of children they care for
- The number of adults caring for the children
- Staff training
- The kinds of food they feed the children
- Programs they offer
- General health and safety practices

There are a limited number of licensed childcare spaces—especially for infants—and they fill up fast. You’ll need time to find out what’s available where you live.

**Parent Subsidy Program**

The Parent Subsidy program assists families with financial support to help pay for the costs of early learning and childcare for children under the age of five attending a designated facility (contact information page 94).

The program provides free childcare services to families with a total annual gross income of $37,500 or less for their preschool children aged five and under.

Families will not exceed 20% of their gross annual family income to cover childcare costs while their preschool child(ren) is attending a designated facility. The level of subsidy is based on a sliding scale (between $37,501 and $80,000) which considers the child care fees, the number of children under the age of five not attending school and the total annual gross household income.

**Double Check**

You’ll find a list of licensed full-time and part-time early learning and childcare centres and early learning and childcare homes on the Parent Portal (Contact information page 94).

**Parent Portal**

The Parent Portal provides a one-stop-shop to help you find child care (contact information page 94). Create an account to search for child care in your area and learn more about services for you:

- Search for licensed child care near you
- Find out what subsidies are available to you
- Learn more about our program to improve the quality, accessibility and affordability of child care

---

**Added info...**

Parents may be able to get government subsidies to help them pay for licensed childcare services. **Daycare Assistance Program** for parents not qualifying for the Parent Subsidy Program:

- For families of children birth to 12 years old, enrolled in a non-Designated Facility, OR
- For families of children 6 to 12 years, enrolled in a Designated Facility

WITH

- Net annual household income of $55,000 or less

Contact your regional Social Development office (Contact information page 95).

---

**Licensed early learning and childcare centres**

There are over 700 licensed early learning and childcare centres in New Brunswick providing care for children from birth to 12 years of age.

To be licensed, operators must meet the requirements of the *Early Childhood Services Act* and the Licensing Regulation - *Early Childhood Services Act*.

The Department of Education and Early Childhood Development conducts inspections in all licensed early learning and childcare centres a few times a year.

**Licensed early learning and childcare homes**

In New Brunswick, the Department of Education and Early Childhood Development licenses early learning and childcare homes and they are inspected a few times a year. There are around 150 licensed early learning and childcare homes in New Brunswick.

To be licensed, operators must meet the requirements of the *Early Childhood Services Act* and the Licensing Regulation - *Early Childhood Services Act*. 
Unlicensed childcare

Unlicensed childcare is another option. When children under age 5 are present, a person may legally provide care in the home for up to 5 children. Of these five children, no more than one can be under the age of two and one must be of school-age. This number includes the caregiver’s own children and does not increase if more than one caregiver is present. If you are concerned about the number of children in the home, contact the Early Learning and Childcare Services of your region. (contact information, page 94).

Unlicensed childcare is often offered by a relative, friend, or neighbour. These caregivers may have training in early childhood education, but this is not required.

Added info...

Most children cry a bit when they start childcare. It’s their way of protesting this change in their life. This is normal and usually passes quickly.

However, some kinds of behaviour may be cause for concern. Talk with the caregiver if your child:

- Seems consistently unhappy
- Continues to cry every morning
- Begins to behave in ways that are different from usual

If you’re not happy with your caregiver’s response:

- Spend some time at the childcare home or centre. Watch what goes on. Drop in for lunch. Drop in at different times during the day.
- Talk with other parents to see if they share your concerns.

If you still have questions, call the office of the Early Learning and Childcare Services of your region (contact information, page 94).

If you have any reason to think that your child—or another child—is being abused, you must report it to Child Protection Services (contact information, page 94). You can speak with a social worker without giving your name.
Choosing childcare

Quality childcare—whether it is licensed or not—should offer children a happy and safe place to play, grow, and learn.

Childcare in your home

If you plan to hire someone to care for your child in your home, get to know the caregiver in advance. Spend some time together in your home. This will allow both you and your child to get to know the caregiver. It will give you a chance to tell him or her about your routines and what you expect.

Always ask for a list of references to contact before hiring a person to provide childcare in your home.

Childcare outside your home

Whether you are considering care in a centre or in the caregiver’s home, arrange to visit in advance. Get an idea of the daily routines and activities being offered. Look at how children and adults treat one another. Try to get a feel for whether or not it’s the kind of childcare you’re looking for.

Take a notepad and pen when you visit. Write down your thoughts about the visit. Note any questions or concerns that you would like to discuss in more detail with the caregiver. Talk with other parents whose children have been cared for in the home or centre.

Here are a few things to think about when choosing either LICENSED or UNLICENSED childcare outside your home:

- Is the home or centre warm and welcoming?
- Is it well-organized, clean, and safe for the children?
- Is it clear who is in charge and who you should speak to when you have questions or concerns?
- How do the caregivers treat each other?
- How many children are present? Are there enough adults to meet the needs of the children?
- Do the caregivers speak to the children kindly? Do they seem to like and care about the children? Do they know the children’s names?
- How do the caregivers handle behaviour issues?
- What do the children do all day? Is there a daily routine?
- Do the activities include indoor and outdoor play? Active play and quiet play? Are there lots of different toys and activities?
- Are outdoor play areas clean and safe?
- Are there animals in the home or centre or nearby—for example, in the next yard?
- Are there activities for children of different ages?
- Can the children make their own play choices both indoors and outside?
- Are the children playing and enjoying themselves?
- Are the meals and snacks nutritious? Are they offered to the children in a respectful way?
Once you find care for your child, be an active participant.

- Go to parent meetings.
- Look at the information posted on the parent board.
- Drop in for visits.

### If you are considering UNLICENSED childcare, ask these questions, too

- Who will be caring for your child? What experience and training do they have? Do they have first aid and CPR training? Has the operator been screened through a Criminal Record and Vulnerable Sector check? Have any other adults in the home been screened through these checks?
- How much does it cost?
- Will you get tax receipts for childcare fees?
- How are parents involved? Are there regular meetings? Will you get an update about your child every day?
- Will you get a written copy of the rules and policies? For example, what if your child gets sick? What if you’re late picking her up? What about holidays? What if the caregiver gets sick?
- Can you visit whenever you like?
- Does anyone in the home smoke?
- Are there toilets and sinks close to where the children play?
- If the early learning and childcare home uses well water, is the water tested regularly? (See page 62 for information on water safety.)

### Ask yourself

- Would you feel good about leaving your child here?
- Would your child be happy here?

- How does the home or centre support children learning to use the toilet?
- Does the home or centre use one of the curriculum frameworks provided by the Department of Education and Early Childhood Education?
Thanks!
The Nova Scotia Department of Health and Wellness acknowledges—with thanks!—the many people whose commitment and concern for Nova Scotia’s mothers, babies, and families have shaped this book. Your advice, insight, support and hard work have made this book possible.

In particular, we’d like to thank the Parent Health Education Resource Working Group whose work has been at the heart of Loving Care.

- **Jennifer Macdonald**, (Co-chair), Provincial Health Educator, Department of Health and Wellness
- **Kathy Inkpen**, Family Health Coordinator, Department of Health and Wellness
- **Bonnie Anderson**, Public Health Nutritionist, Capital Health
- **Susan DeWolf**, Family Support Worker, Extra Support for Parents Volunteer Service, IWK Health Centre
- **Natasha Horne**, Community Program Coordinator, Dartmouth Family Centre
- **Sherry MacDonald**, Public Health Nurse, Guysborough Antigonish Strait & Cape Breton District Health Authorities
- **Vicki MacLean**, Public Health Nurse, Colchester East Hants & Pictou County District Health Authorities
- **Kathy Penny**, Public Health Nurse, Capital Health
- **Trudy Reid**, Public Health Nutritionist, Cumberland Health Authority
- **Annette Ryan**, Perinatal Nurse Consultant, Reproductive Care Program of Nova Scotia
- **Tina Swinamer**, Coordinator, Early Childhood Nutrition, Department of Health and Wellness
- **Shelley Wilson**, Public Health Nutritionist, South West Nova District Health Authority

**Special thanks** to the many people who, over the years, have contributed to the development or revision of the Loving Care books.

- Kim Arcon, Community Home Visitor, South West Nova, Annapolis Valley, and South Shore District Health Authorities
- Sue Arsenault, Public Health Nurse, Colchester, East Hants, Cumberland, and Pictou County Health Authorities
- Rose Couch, Early Childhood Coordinator, Department of Health and Wellness
- Alice de la Durantaye, Community Outreach Worker, South West Nova District Health Authority
- Shelley Thompson, Coordinator, Child Care Centres Policy & Program Development, Department of Community Services
- Sarah Melanson, Early Childhood Consultant, Public Health Services, Capital Health
- Shannon O’Neill, Public Health Dental Hygienist, Public Health Services, Capital Health
- Amy MacAulay, Early Childhood Coordinator, Public Health Services, Capital Health
- Renée Hartleib, Writer/Editor/Researcher, and parents of the Rainbow Playtime group
Thanks!

Canada’s Food Guide

Eat a variety of healthy foods each day

- Have plenty of vegetables and fruits
- Eat protein foods
- Choose whole grain foods
- Make water your drink of choice

Information in this section was taken from Canada’s Food Guide.
For more information on Canada's Food Guide, please visit https://food-guide.canada.ca/en/
Adapted and reproduced with permission from the Minister of Health, 2019
Healthy Food Choices

Make it a habit to eat a variety of healthy foods each day.

Eat plenty of vegetables and fruits, whole grain foods and protein foods. Choose protein foods that come from plants more often.
  • Choose foods with healthy fats instead of saturated fat

Limit highly processed foods. If you choose these foods, eat them less often and in small amounts.
  • Prepare meals and snacks using ingredients that have little to no added sodium, sugars or saturated fat
  • Choose healthier menu options when eating out

Make water your drink of choice
  • Replace sugary drinks with water

Use food labels
Be aware that food marketing can influence your choices

Healthy Eating Habits

Healthy eating is more than the foods you eat. It is also about where, when, why and how you eat.

Be mindful of your eating habits
  • Take time to eat
  • Notice when you are hungry and when you are full

Cook more often
  • Plan what you eat
  • Involve others in planning and preparing meals

Enjoy your food
  • Culture and food traditions can be a part of healthy eating

Eat meals with others
Be mindful of your eating habits

Be mindful of your eating habits means being aware of:

- how you eat
- why you eat
- what you eat
- when you eat
- where you eat
- how much you eat

Being mindful can help you:

- make healthier choices more often
- make positive changes to routine eating behaviours
- be more conscious of the food you eat and your eating habits
- create a sense of awareness around your everyday eating decisions
- reconnect to the eating experience by creating an awareness of your:
  - feelings
  - thoughts
  - emotions
  - behaviours

Cook more often

Cooking and preparing food can support healthy eating habits. Cooking allows you to:

- learn new skills
- rely less on highly processed foods
- control the amount of sauces and seasonings
- make foods that you and your family like and will eat
- save money by avoiding extra money spent on meals eaten out
- choose healthy ingredients like:
  - fruits
  - vegetables
  - whole grain foods
  - protein foods
    - choose protein foods that come from plants more often
Enjoy your food

The benefits of enjoying your food include:
• tasting the flavours
• being open to trying new foods
• developing a healthy attitude about food

Knowing that you are making healthy food choices can increase your enjoyment of food.

Enjoying your food includes:
• socializing at mealtime
• enjoying shopping for food
• preparing and cooking food
• growing or harvesting your own food
• getting to know the people that grow or produce your food
• involving others in meal planning, preparation and clean up

Eat meals with others

Enjoying healthy foods with family, friends, neighbours or co-workers is a great way to connect and add enjoyment to your life. It can provide many benefits and contribute to a healthy lifestyle.

By eating with others you can:
• enjoy quality time together
• share food traditions, across generations and cultures
• explore new healthy foods that you might not normally try

Food is often a main part of celebrations and special events. However, eating with others doesn't have to be saved for special events.
Different types of information may be available on food packages. This information can help you make informed choices about healthy and safe foods.

Nutrition facts table: provides information on serving size, calories, certain nutrients and % daily values (% DV). The % DV can be used as a guide to show you if the serving of stated size has a little or a lot of a nutrient.

• 5% DV or less is a little
• 15% DV or more is a lot

Ingredient list: lists all of the ingredients in a food product by weight. The list starts with the ingredient that weighs the most and ends with the ingredient that weighs the least.

Nutrition claims: includes nutrient content claims and health claims. All foods with a claim must meet certain criteria but some foods may not have a claim even though they meet the criteria.

Food allergen labelling: provides information to help you avoid specific food allergens or sensitivities.

Date labelling: provides information on how long your unopened food product will last and the safety of certain products. The most common types of dates are “best-before”, “packaged on” and “expiration” dates.
Limit foods high in sodium, sugars or saturated fat

If you eat highly processed foods, try to:
• eat them less often
• eat them in small amounts
• replace them with healthier options

You can:
• replace sugary drinks with water
• try not to keep highly processed foods at home
• choose healthier menu options when eating out
• choose less processed foods, such as:
  ◦ leftover baked chicken instead of deli meats
  ◦ steel-cut oats instead of sweetened instant oats
• make homemade versions of your favourite highly processed foods:
  ◦ try a healthy muffin recipe to replace store-bought muffins
  ◦ make your own frozen dinners by choosing a healthy recipe and freezing it in meal-sized portions
• stock your kitchen with healthy snacks. Try quick and easy options like:
  ◦ nuts
  ◦ fruit
  ◦ carrots
  ◦ hard-boiled eggs
• plan your meals and snacks in advance to include:
  ◦ vegetables and fruit
  ◦ whole grain foods
  ◦ protein foods
• limit the use of highly processed spreads and dressings in your meals and snacks
• use the food label when grocery shopping to make informed choices

food-guide.canada.ca/en/healthy-eating-recommendations/limit-highly-processed-foods/
Food marketing is all around us. You likely receive a constant stream of changing and often conflicting messages about food. This can make it hard to make healthy food choices.

Food marketing can impact you in many different ways. It is designed to:

- create food trends
- encourage you to:
  - buy certain foods or drinks
  - buy foods in order to get promotional items such as:
    - loyalty points
    - tickets to movies or sports events
    - coupons for future food purchases
- create links between certain foods or brands and a particular lifestyle
- build brand loyalty so you will continue to purchase from a particular store or products with a brand name
A Parent’s Guide to Car Seats

Choosing and using the right car seat.
For safety’s sake…

Your child should be in a properly installed car seat whenever he or she rides in any car. This includes riding in taxis or in grandparents’ or babysitters’ cars.

Use this information to help you learn how to install and use car seats in your own car, van, truck or SUV. Your car seat instructions and car owner’s manual will have information specific to your own car seat and vehicle.

Please note: When we use the word "car" it includes cars, vans, trucks and SUVs.
Car crashes kill and injure more children than any other cause. When you use the right car seat in the right way, you can reduce the risk that your child will be hurt or killed by 70%. Car seats and booster seats save lives.

For a car seat to protect your child, you must:

- Use a car seat that meets Transport Canada’s safety regulations. Look for a seat with the safety mark shown to the right.
- Choose the seat that is right for your child’s age and size.
- Put the seat in your car the right way.
- Buckle your child in the seat correctly every time.

Once you’ve chosen the right car seat for your child’s age and size, you can use the checklists in this booklet to be sure that:

- You put the seat in your car the right way.
- You buckle your child into the seat correctly.

The kind of seat children need changes as they grow. Don’t be in a rush to move your child from one kind of seat to the next. Make sure that your child is old enough and big enough to be safe in the next stage of seat.

If you are using an old or used car seat, check that:

- it has all of its parts including the instruction manual
- it is not visibly damaged in any way
- it is not older than the manufacturer’s expiry date
- it has never been in a crash

For safety’s sake...

Never ride with a baby or child in your arms or on your lap.

Never leave a child alone in a car.

Objects in the car can fly around and injure people during a crash or sudden stop. Be sure everything in your car is strapped down or stored in the trunk.
The Safest Spot in Your Car ................. 4

Types of Car Seats ....................... 6

Rear-Facing Seats ....................... 8
Babies need a rear-facing seat from birth until they are at least 1 year old and weigh at least 10 kg (22 pounds). Rear facing is safest for young children. Many seats can be used rear facing until your baby weighs 18 kg (40 pounds).

Forward-Facing Seats ................. 12
Children must be at least 1 year old and weigh at least 10 kg (22 pounds) before they move to a forward-facing seat. They must continue to use this seat until they weigh at least 18 kg (40 pounds). Some forward-facing car seats can be used with harness straps until your child weighs up to 30 kg (65 pounds).
Booster Seat ........................................ 16
Children must weigh at least 18 kg (40 pounds) to move to a booster seat. A child should also be at least 4 years old. It’s safest for children use a booster seat until they are at least 145 cm (4 feet 9 inches) tall.

Seat Belt ............................................. 18
Children are not ready for a seat belt until they are at least 145 cm (4 feet 9 inches) tall. They must be tall enough for their legs to bend over the edge of the seat while sitting up straight.

Where to find more help ............... 21

For safety’s sake…

When you buy a car seat:
• Read and follow the directions that come with your car seat. Every brand of car seat is a little different. Each will come with an instruction booklet.

• Send in the registration card or register online when you buy a car seat. If you do this, the manufacturer can let you know if there are any recalls or problems with the seat.

• Check with Transport Canada to see if there are any recalls on the seat you plan to use. You’ll find contact information for Transport Canada on page 21.
The safest spot for your child is in the back seat of your car. Even when your child no longer needs a car seat or booster seat, he or she is safest in the back seat until age 13.

Airbags are dangerous for children. Even without an airbag, children are much safer riding in the back seat.
For safety’s sake…

If you don’t have a back seat:

- It is **never safe** to put a rear-facing infant seat in a seat with an active front air bag. This includes airbags that use a weight sensor.
- If you and can disable the airbag with a key or switch you may be able to install your child’s seat in the front passenger seat. Remember to re-activate it for an adult passenger. Check your vehicle manual for more information.

The middle seat of a truck is not a safe place for a child, because he or she would be too close to the driver's airbag.

**Airbags are dangerous for children.**

To find out if it’s okay to use a car seat in the front seat of your car:

- Check your owner’s manual
- Call your car’s manufacturer
- Call Transport Canada
  
  (You’ll find contact information for Transport Canada on page 21.)

The middle seat

If your car will allow it, the middle of the back seat is the safest place. The side positions are also safe. The middle position is NOT the safest if you cannot get a tight and secure installation in that spot.

In many cars you can only use the Universal Anchorage System (page 13) or the lower anchors to install a seat on the sides. You can still use the seat belt to install the car seat in the middle. Check your car owner's manual for more information.

For a child in a booster seat or seat belt, the middle seat is no longer the safest when:

- **There is a lap-only belt.** A booster seat can only be used with a lap AND shoulder belt. A child in a seat belt is not safe with a lap-only belt. Choose a seat with a lap and shoulder belt.
- **There is no head support.** A child needs head support to the tops of his or her ears. This support can come from a high-back booster seat or a tall seat back or the car head rest.
Types of Car Seats

Rear-facing Seats
Babies need a rear-facing seat from birth until they are at least 1 year old and weigh at least 10 kg (22 pounds). Rear facing is safest for babies and young children.

A **rear-facing only car seat** can be used from birth until at least 10 kg (22 pounds). Some rear-facing only seats can hold a larger baby and can be used up to 18 kg (35 pounds). Check the label on your seat for weight and height limits.

These seats can be carried with a handle and are then attached to a base that stays in the car. Most models can also be installed without the base.

A **convertible car seat** can be used rear facing for longer and can then be used as a forward-facing seat. Most models can be used rear facing until your child weighs at least 18 kg (40 pounds), and there are a few that can be used rear facing for even longer. Check the label on your seat for weight and height limits.
Forward-facing Seats
Children must be at least 1 year old and weigh more than 10 kg (22 pounds) before they can move to a forward-facing car seat. It is safer to keep your baby in a rear-facing convertible seat longer.

Children must use a forward-facing car seat until they weigh at least 18 kg (40 pounds). Some forward-facing seats can be hold children up to 30 kg (65 pounds). It is safest to keep your child in a seat with a 5-point harness until he or she is ready for a booster. In order to use a seat with a 5-point harness longer, look for a seat with high weight and height limits.

Some seats can be used as a booster seat once the harness is outgrown.

Booster Seats
Children must weigh at least 18 kg (40 pounds) to move to a booster seat. A child should also be at least 4 years old and have the maturity to sit in a booster seat correctly. Your child should use a booster seat until he or she is at least 145 cm (4 feet 9 inches) tall and fits the seat belt correctly without a booster seat.
Babies need a rear-facing infant seat from birth until they are at least 1 year old and weigh at least 10 kg (22 pounds). Rear-facing car seats provide the best protection for your baby and toddler’s head and neck.

Many babies start off using an infant seat with a handle and then move to a convertible seat later. Most convertible seats can be used in the rear-facing position until your baby weighs 18 kg (40 pounds). Check the label on your seat for height and weight limits. It is okay for your baby’s feet to touch the back of the car. It is safest to keep your toddler rear-facing for as long as he or she still fits in his or her larger convertible car seat.
1. Put the seat in your car

Cars built after September 2002 have a Universal Anchorage System (UAS/LATCH). If you are using this system:

☐ Check the Owner’s Manual to see how to use the UAS/LATCH system in your car. In most cars you cannot use the UAS in the middle seat. Use the seatbelt to install the seat in the middle instead.

☐ Put the UAS/LATCH strap through the marked pathway for rear facing on the car seat or base. Connect the car seat’s UAS/LATCH strap to the UAS anchors in the car.

☐ Push down hard on the car seat or base and pull the UAS belt tight. The seat should not be able to slide side to side or front to back more than 2.5 cm (1 inch). If the top of the seat moves, that is normal.

*If you are using a UAS/LATCH system do not also use the regular seat belt.*

*If you are using a lap-only belt to install:*

☐ Check the Owner’s Manual to find out how to use a seat belt with a rear-facing car seat in your car.

☐ Put the seat belt through the marked pathway for rear facing on the car seat or base. You’ll find the correct pathway in your car seat instruction booklet. Buckle the seat belt.

☐ Push down hard on the car seat or base and pull the seat belt tight. The seat should not be able to slide side to side or front to back more than 2.5 cm (1 inch). If the top of the seat moves, that is normal.

☐ Test the seatbelt to be sure it stays tight. If the seat belt loosens, tighten it again, unbuckle the seat belt, flip the buckle over and buckle it again.
If you are using a lap and shoulder belt to hold the car seat:

- Check the Owner’s Manual to find out how to use a seat belt with a rear-facing car seat in your car.

- Put the seat belt through the marked pathway for rear facing on the car seat or base and buckle it. You’ll find the correct pathway in your car seat instruction booklet. Buckle the seat belt.

- Pull the shoulder belt all the way out. You’ll hear it click when it reaches the end. Let go of it. As the belt shortens, push **down** on the infant car seat or base. Push hard. At the same time, pull **up** on the shoulder belt so that it will lock in place as tightly as possible.

- Test the seat belt to be sure it stays tight. The car seat should not be able to slide side to side or front to back more than 2.5 cm (1 inch). If the top of the seat moves, that is normal.

- Not all seatbelts lock in this way. When you pull your seatbelt all the way out and let it go, it should shorten but not lengthen again. If it can be pulled out again, it doesn’t lock and you will need to use a locking clip to keep the car seat in place. Only use a locking clip on a buckle that can slide along the belt.

*If you find that a tight shoulder belt is tipping the car seat to the side, you may leave the belt unlocked and use a locking clip instead*

### How to use a locking clip

- **Place within 2.5 cm (1 inch) of the edge of the buckle.**
- Squeeze belts through each prong of clip.
- Locking clip lies flat and should look like the photo.
Make sure that the angle is correct for your rear-facing car seat

Rear-facing seats need to be installed at a reclined angle. If a seat is too upright it is not safe for newborns and young babies who need to be tilted at an angle to keep their heads lying back.

☐ Check the labels on the seat to see if it is at the right angle in the car. You may find a line that should be level with the ground or there might be a guide that can only be read when the car is parked on flat ground.

☐ Adjust the angle of your seat. Some seats have a way to adjust the seat to be more reclined. If the seat is still too upright or does not have another way to adjust the angle, you should check the instruction booklet to find out if you may add a rolled towel or pool noodle to change the angle of your seat.

☐ Some seats can be installed more upright for an older baby or toddler. Check your labels.
2. Put your child in the seat

☐ The shoulder harness should be threaded in the car seat as shown in the instructions. Choose the slot that is even with or slightly below your child’s shoulders for rear facing.

☐ The child’s bottom should be placed all the way back.

☐ Buckle the harness over the child’s legs.

☐ The chest clip should be level with your baby’s armpits.

☐ The shoulder harness should stay on the baby’s shoulders.

☐ Pull the harness snug. You should not be able to pinch the harness together at the shoulder.

☐ Do not use snowsuits, bunting bags or head-huggers that did not come with the seat. You may use rolled receiving blankets on either side of the baby.
Babies must be at least 1 year old and weigh more than 10 kg (22 pounds) before they move to a forward-facing seat. There is no rush. It is safer to keep your child in a rear-facing convertible seat for as long as he or she still fits.

Children must use a forward-facing car seat until they weigh 18 kg (40 pounds). Some forward-facing car seats can be used with harness straps until your child weighs 30 kg (65 pounds). Look for a seat with a high weight and height limit so that you can use a harnessed seat longer.

**Before you install the car seat**
Put your child in the car seat to see how the harness straps fit. The harness straps should come out of a slot that is level with or above your child’s shoulders.
1. Put the seat in your car

Cars built after September 2002 have a Universal Anchorage System (UAS/LATCH). If you are using this system:

- Check the Owner’s Manual to see how to use the UAS/LATCH system in your car. In most cars you cannot use the UAS in the middle seat. Use the seatbelt to install the seat in the middle instead.

- Put the UAS/LATCH strap through the marked pathway for forward facing on the car seat. Connect the car seat’s UAS strap to the UAS anchors in the car.

- Push down hard on the car seat and pull the UAS/LATCH belt tight. The seat should not be able to slide side to side or front to back more than 2.5 cm (1 inch).

- Hook the tether strap on the car seat to the tether anchor in the car. Pull the tether strap tight. If you don’t see a tether anchor, your owner’s manual will show you where it is.

*If you are using a UAS/LATCH system do not also use the regular seat belt.*

If you are using a lap-only belt to hold the car seat:

- Check the Owner’s Manual to find out how to use a seat belt with a front-facing car seat in your car.

- Put the seat belt through the marked pathway on the car seat. You’ll find the correct pathway in your car seat instruction booklet. Buckle the seat belt.

- Push down on the car seat and pull seat belt tight. Push hard.

- Test the seatbelt to be sure it stays tight. If the seat belt loosens, tighten it again, unbuckle the seat belt, flip the buckle over and buckle it again. The car seat should not be able to slide side to side or front to back more than 2.5 cm (1 inch).
Hook the tether strap on the car seat to the tether anchor in the car. Pull the tether strap tight. If you don’t see a tether anchor, your owner’s manual will show you where it is. It is never safe to use a forward-facing car seat without a tether.

**If you are using a lap and shoulder belt to hold the car seat:**

- Check the Owner’s Manual to find out how to use a seat belt with a forward-facing car seat in your car.

- Put the seat belt through the marked pathway for forward facing on the car seat and buckle it. You’ll find the correct pathway in your car seat instruction booklet. Buckle the seat belt.

- Pull the shoulder belt all the way out. You’ll hear it click when it reaches the end. Let go of it. As the belt shortens, push **down** on the car seat. Push hard. At the same time, pull **up** on the shoulder belt so that it will lock in place as tightly as possible.

- Not all seatbelts lock in this way. When you pull your seatbelt all the way out and let it go, it should shorten but not lengthen again. If it can be pulled out, it doesn’t lock and you will need to use a locking clip to keep the car seat in place. Only use a locking clip on a buckle that can slide along the belt. How to use a locking clip is on page 10.

- Test the seat belt to be sure it stays tight. If the seat belt loosens, use a locking clip. The car seat should not be able to slide side to side or front to back more than 2.5 cm (1 inch).

- Hook the tether strap on the car seat to the tether anchor in the car. Pull the tether strap tight. If you don’t see a tether anchor, your owner’s manual will show you where it is. It is never safe to use a forward-facing car seat without a tether.

*If you find that a tight shoulder belt is tipping the car seat to the side, you may leave the belt unlocked and use a locking clip instead.*
2. Put your child in the seat

- The shoulder harness should be threaded in the car seat as shown in the instructions. Choose the slot that is even with or above your child’s shoulders for forward facing.
- The child’s bottom should be placed all the way back.
- Buckle the harness over the child's legs.
- The chest clip should be level with your child’s armpits.
- The shoulder harness should stay on the child’s shoulders.
- Pull the harness snug. You should not be able to pinch the harness together at the shoulder.
- Do not use bulky coats, snowsuits, or any items that are not intended to be used with your seat.

You should not be able to hold a pinch of the harness together at the shoulder.
Using a Booster Seat

For safety’s sake...

When the booster seat is empty, buckle it in place or take it out of your car. A loose booster seat can bounce around in a sudden stop or crash.

Children must weigh at least 18 kg (40 pounds) before moving into a booster seat. Your child should also be at least 4 years old and have the maturity to sit straight and tall in order to use a booster seat safely. Your child must also have the maturity to never meddle with or unbuckle the seat belt. There is no rush. Some car seats can be used with a 5-point harness until your child weighs 30 kg (65 pounds).

Children should continue to use a booster seat until they are 145 cm (4 feet 9 inches) tall and fit the adult seat belt correctly. Most children are between 10-12 years old when they reach this height.
Adult seat belts are too big for a child’s small body. A booster seat lifts your child up so that the seat belt fits safely across the strongest bones and away from the soft belly.

A booster seat also helps the shoulder portion of the belt to fit. When the shoulder belt is uncomfortable a child may move it off his or her shoulder and tuck it unsafely under the arm or behind the back.

Booster seats can be used only in seats with a lap AND shoulder belt. There are two kinds of Booster Seats:

- **High Back**: These seats support the child’s head in cars with low-backed seats or no headrest in the car.
- **Backless**: They are safe in cars with high seat backs or headrests.

All children need support behind their heads to the top of their ears. This support can come from a high-back booster seat, a tall seat back or a car headrest. If the child's ears are above, he or she may need a different booster seat with a higher back.

1. **Put the seat in your car:**
   - Check the Owner’s Manual to find out how to use a booster seat in your car.
   - Follow the instructions that come with your booster seat.
   - Put the booster seat in the back seat of your car.

2. **Put your child in the seat**
   - The lap belt is low and snug over the hips.
   - The shoulder belt crosses the middle of your child’s chest. Your child could be hurt or killed if the shoulder belt is behind his or her back or under the arm.
Using a Seat Belt

When a child reaches 145 cm (4 feet 9 inches) tall he or she may be ready to use a regular seat belt. Most children are between 10-12 years old before they reach this height. There’s no rush to move to a regular seat belt.

For safety’s sake…

Children are safest in the back seat, away from an active airbag until they are 13 years old.
Children are ready for a seat belt when:

- They are at least 145 cm (4 feet 9 inches) tall.
- Their knees bend at the edge of the seat while sitting up straight with their back against the vehicle seat.
- The lap belt stays low and snug across their hip bones.
- The shoulder belt fits across the middle of their chest and rests between their neck and shoulder.

  It should NOT be across the child’s neck, behind the back or under the arm.
- They can sit this way for the whole trip without slouching.

If your child does not fit the seat belt in your car, he or she still needs a booster seat. A child may fit well in one car and still need a booster seat in another car.

Partners in Children’s Safety
Drinking alcohol **ALWAYS** has some risk. There is a way to drink that will limit your risk of long- and short-term harm.

### The Limits

Over time, even moderate drinking can increase your risk of some chronic diseases, including high blood pressure, depression and many forms of cancer. To reduce your long-term health risks, follow these guidelines:

- **Women:** 0 to 2 drinks a day, up to 10 drinks a week
- **Men:** 0 to 3 drinks a day, up to 15 drinks a week

Once in a while you might have an extra drink, but it’s important to stay within the weekly limits.

Pick a couple of non-drinking days each week. This will help you to avoid developing a drinking habit.

### Is it OK to drink my weekly limit on the weekend?

No. The weekly limits are designed to be just that – a weekly limit, not a daily or weekend limit. Even if you only drink heavily once in a while, it increases your risk of injury and long-term health problems.

### Pregnant? Breastfeeding?

If you are pregnant, or planning to become pregnant, the safest choice is to drink no alcohol at all.

If you are breastfeeding, there will be alcohol in your breast milk after you drink. If you plan to drink alcohol, there are things you can do to make sure the alcohol doesn’t reach your baby. For example, you can breastfeed right before you drink alcohol so the alcohol can leave your breast milk before your baby’s next feed. Talk to your health care provider about how you can continue to breastfeed.

### When the limit is zero

Sometimes it isn’t safe to drink alcohol. Do not drink when:

- driving any vehicle or using machinery or tools
- pregnant or planning to become pregnant
- taking medicine or other drugs that interact with alcohol
- doing any kind of dangerous physical activity
- living with mental or physical health problems
- responsible for the safety of others
- making important decisions
- living with alcohol dependence.

### Children and youth

Children and youth should not drink before they reach Nova Scotia’s legal age of 19. A young person’s brain and body continue to develop into the late teens and early 20s. Alcohol can harm mental and physical development. It is safer to delay drinking for as long as possible.
To use these guidelines…

Set limits for yourself and stick to them.

- Stick to the daily and weekly limits.
- Drink slowly. Have no more than 2 drinks in any 3 hours.
- For every alcoholic drink, have one non-alcoholic drink.
- Eat before and while you are drinking.
- To avoid developing a habit, have non-drinking days every week.
- Always consider your age, body weight and any health problems. These might make lower limits, or not drinking at all, a good idea.

Pay attention to your surroundings when drinking.

- Your safety is affected by where, when and with whom you drink.

Don’t drink “for your health.”

- Starting to drink, or increasing your drinking, will not improve your health.
  - Only middle-aged men and women get health benefits from drinking small amounts of alcohol.
  - Any health benefits are cancelled if you drink more than the recommended daily limit even once in a while.
  - Your risk of getting some kinds of cancer increases when you drink as little as one drink per day.

Talk with the young people in your life about the risks of drinking.

- Make sure they know that in Nova Scotia:
  - It is illegal to drink alcohol if they are under the age of 19.
  - It is illegal for anyone to buy or give alcohol to anyone under the age of 19.

- Teens:
  - Help teenagers find ways to delay drinking for as long as possible.
  - If they choose to drink, they should never have more than 1 – 2 drinks at a time, and never drink more than 1 – 2 times per week.

- Young people in their late teens to age 24:
  - Be sure they know that the brain continues to develop into the early 20s. Because of this, they should never exceed the daily and weekly amounts outlined in “The Limits”.

What does “a drink” mean?

- 341 ml (12 oz.) bottle of 5% beer, cider, or cooler
- 142 ml (5 oz.) glass of 12% wine
- 43 ml (1.5 oz.) serving of 40% distilled alcohol (rye, gin, rum, etc.)
