

The Drug Information System and New Brunswick Prescription Monitoring Program

Dear customers and patients,

The Pharmacy Act and the *Prescription Monitoring Act* require pharmacies to submit records of prescriptions filled in New Brunswick to the New Brunswick Drug Information System (DIS) and the New Brunswick Prescription Monitoring Program (NB PMP).

The drug information system and prescription monitoring program make it easier for authorized health-care professionals to use a patient's most up-to-date prescription information to help make safe, more informed decisions about patient care.

To ensure your prescriptions are properly added to your medication history, your pharmacist will need your provincial health card (Medicare) number or its federal equivalent.
