Introduction

The primary purpose of taxation is to raise revenues to finance government expenditures. As with other jurisdictions, New Brunswick's tax system has many provisions that are designed to accomplish public policy objectives. They include tax credits, reductions, allowances, rate reductions, rebates, deferrals, and relief programs. Such features are intended to recognize: differences in ability-to-pay; different circumstances of taxpayers; and various other considerations relating to fairness and competitiveness. Provisions or features of the tax system that result in lower revenues than would otherwise be attainable are often referred to as tax expenditures. The term "tax expenditure" is used because many of these provisions have policy objectives that could alternatively be accomplished through direct government expenditures.

Defining a tax expenditure is not straightforward given that the policy objectives of some provisions could not feasibly be replicated by direct expenditure programs. Nevertheless, reports on tax expenditures often include a wide range of tax provisions.

The federal government uses a broad definition of tax expenditures and provides information on a wide range of tax measures¹. It includes provisions that are considered part of the "benchmark tax system" and thus, are not considered to be tax expenditures. The benchmark tax system refers to the most fundamental aspects, such as the basic personal amount that serves to make the tax system more progressive and relieve tax burden on low-income tax filers. Although such features are considered to be part of the benchmark tax system, they are reported on in the interest of transparency.

As with the federal tax expenditure report, this document also adopts a broad definition of tax expenditures and includes a wide range of New Brunswick tax provisions, including ones that are not necessarily considered tax preferences. For example, a number of income tax provisions are included in this report that are similar to federal provisions that have been identified as being part of the "benchmark" tax system by the federal government. Another example, in the area of property taxation, is the residential property tax credit that is fundamentally a reflection of a legislated zero-provincial tax rate on owner-occupied residential housing.

Tax expenditures are not presented to the Legislative Assembly in the same way as a departmental spending program, and in many cases, there is little information publicly available on the cost of provincial tax expenditures. Where many of these tax expenditures are administered federally, data is lagged and may be subject to interactions with other elements of the tax system, compared to provincially administered programs.

This document reports on New Brunswick tax expenditures, providing: a brief description of each measure's objective, implementation date, and the estimated cost.

It is important to note that there are interactions between various provisions of the tax system, particularly in the area of income taxation. The forgone revenue for each tax expenditure item has been estimated based on the assumption that other provisions of the tax system remain unchanged. Since there is interaction between personal income tax credits, for example, elimination of one would leave some tax filers more room to claim other unused credits or tax reductions. Such interactions are taken into account in the cost estimates provided. However, if changes to tax credits were to be considered, the impact on provincial revenue may differ when

-

taking into account factors such as timing, what changes are occurring and potential implications on other revenue. For these reasons, the costs of each individual item are not additive to provide an overall cost of New Brunswick's tax expenditures.

These broadly defined tax expenditures are presented as follows:

- New Brunswick's "individual" tax expenditures, including tax credits, rebates, exemptions, and relief programs provided to individuals;
- New Brunswick's "business" tax expenditures, including tax credits, rebates, and exemptions that benefit businesses; and
- New Brunswick's "other" tax expenditures, including exemptions, and rebates provided to non-profit organizations, institutions or municipalities.

Changes to Tax Expenditures Since the 2021 Edition

Home Energy Assistance Program

2021 was the final year of the Home Energy Assistance Program.

Personal Income Tax

For the 2022 taxation year, the basic personal amount was increased from \$10,817 to \$11,720, and the Low-Income Tax Reduction threshold was increased from \$18,268 to \$19,177.

Property Tax

For the 2022 property taxation year, temporary property tax relief is available for owners of eligible residential rental properties (four units or more) and non-residential properties to help manage property tax increases due to rising assessments. For eligible properties, the value of the relief is equal to the provincial and local property taxes on the annual assessment increase exceeding 10 per cent.

Key Terminology

Credit – non-refundable: An amount subtracted from tax payable. Non-refundable tax credits can only be used to reduce taxes payable, providing relief against taxes paid previously or currently owing. If tax credits are greater than taxes payable, there are no additional amounts returned to the taxpayer. With a non-refundable tax credit, the taxpayer must have tax payable in order to receive the credit; if there is no tax payable the taxpayer will not receive any portion of the non-refundable credit. Example: if a taxpayer has a \$2,000 non-refundable tax credit and their tax payable is \$1,500, then the value of the credit they will receive is \$1,500 (amount of taxes payable).

Credit – refundable: With a refundable tax credit, taxpayers receive the full value of the tax credit regardless of the amount of taxes payable. With a refundable tax credit, if the value of the tax credit is greater than the amount of tax payable, the balance is paid to the taxpayer. Example: if a taxpayer has a \$2,000 <u>refundable</u> tax credit and their income tax payable is \$1,500, then the value of the refundable credit they will receive is \$2,000 (\$1,500 subtracted from tax payable, and

\$500 paid to the taxpayer). Under accounting rules, refundable tax credits are often reported as provincial spending programs given their nature.

Deduction: An amount subtracted from total income in determining net income, or from net income in determining taxable income. (Note: Under the Canada-New Brunswick Tax Collection Agreement, the federal government determines "taxable income", so New Brunswick does not have the ability to use deductions for income tax purposes).

Deferral: Refers to instances where a taxpayer can delay paying taxes (all or a portion) to some future period.

Exemption: The non-taxation of certain taxpayers, income, gains or goods and services. Note: Under the Canada-New Brunswick Tax Collection Agreement, the federal government determines "taxable income", so New Brunswick does not have the ability to use exemptions for income tax purposes. The federal government also administers the province's Harmonized Sales Tax (HST) and defines the common tax base.

Rebate and refund: An amount of tax paid that is refunded to the taxpayer.

Endnotes

- 1. Defined by the federal government.
- 2. Credit for CPP Contribution: From 2019 to 2023, the Canada Pension Plan (CPP) is being gradually enhanced and contributions under the enhanced portion will be deductible from total income. From 2024 to 2025, a second higher limit will be introduced, a second earnings ceiling in addition to the first earnings ceiling. The costing reflects the total program cost which includes the enhanced CPP cost and the CPP core contributions cost.
